Document Identifier: **PMC8008137**

SciScore Report

Below you will find your SciScore report containing three tables. Your score is calculated based on adherence to scientific rigor criteria (Table 1) and identification of key biological resources (Table 2). Table 3 contains statistical tests and oligonucleotides but is not scored. If SciScore makes any mistakes, please contact us to help us learn and improve.

Table 1: Rigor Adherence Table

Ethics
Field Sample Permit: 26 The MINORS score is geared toward nonrandomized studies and was originally developed for surgical fields because of the large number of observational studies in that field.
Inclusion and Exclusion Criteria
There were 21 articles that appeared in only 1 of the 2 databases , and they were excluded.
Attrition
not required.
Sex as a biological variable
not required.
Subject Demographics
Age: not required.
Weight: not required.
Randomization
The MCMS is a tool that accounts for the study design , methodology , and quality of outcome reporting , and its reliability has been validated with 99 reproducibility . 14,37,42 The Jadad scale favors studies that are well randomized and blinded and also assesses the appropriateness of individual randomization and blinding methods .
Blinding
The MCMS is a tool that accounts for the study design , methodology , and quality of outcome reporting , and its reliability has been validated with 99 reproducibility . 14,37,42 The Jadad scale favors studies that are well randomized and blinded and also assesses the appropriateness of individual randomization and blinding methods .
Power Analysis
not detected.
Replication

not required.	
Data Information	
Identifiers: The MCMS is a tool that accounts for the study design , methodology , and quality of outcome reporting , and its reliability has been validated with 99 reproducibility . 14,37,42 The Jadad scale favors studies that are well randomized and blinded and also assesses the appropriateness of individual randomization and blinding methods .	14,37,42

Table 2: Key Resources Table

Your Sentences	REAGENT or RESOURCE	SOURCE	IDENTIFIER

Other Entities Detected

Your Sentences	Recognized Entity
Statistical Tests	
Statistical Analysis The data were assessed for a normal distribution using a Kolmogorov-Smirnov test .	Kolmogorov-Smirnov test
Based on the results , the Spearman rank coefficient (R S) was used to determine the degree of correlation if the data did not follow a normal distribution .	Spearman rank coefficient
The Pearson correlation coefficient (R) was used to determine the degree of correlation if the data were normally distributed.	Pearson correlation
Two-group comparisons were analyzed with the Student t test .	t test

SciScore is an automated tool that is designed to assist expert reviewers by finding and presenting formulaic information scattered throughout a paper in a standard, easy to digest format. ***SciScore is not a substitute for expert review.*** SciScore also checks for the presence and correctness of several unique identifiers, including RRIDs (research resource identifiers) in the manuscript, detects sentences that appear to be missing RRIDs, and can even suggest RRIDs under certain circumstances. **All RRID suggestions should be verified;** only the author can know whether the suggestions are correct.
