SciScore Report

Below you will find your SciScore report containing three tables. Your score is calculated based on adherence to scientific rigor criteria (Table 1) and identification of key biological resources (Table 2). Table 3 contains statistical tests and oligonucleotides but is not scored. If SciScore makes any mistakes, please contact us to help us learn and improve.

Table 1: Rigor Adherence Table

Ethics
Consent: Following this, participation was based on participants freely given informed consent.
Inclusion and Exclusion Criteria
We excluded Czech Republic because it did not include several health variables that were otherwise part of the main questionnaire, and Israel because it is not a European country.
Attrition
Data from different countries were pooled in order to generate enough power to detect statistical significance (total n=35 475).
Sex as a biological variable
If both mothers and fathers education were reported, the mean was used.
Subject Demographics
Age: The ESS selected participants using strict probability samples of the resident national population aged 15 years or older living in private households.
Randomization
not detected.
Blinding
not detected.
Power Analysis
not detected.
Replication
not required.

Table 2: Key Resources Table

Your Sentences	REAGENT or RESOURCE	SOURCE	IDENTIFIER
Software and Algorithms			
Statistical analysis The statistical analysis was done with Stata V.13.1 (StataCorp, College Station, Texas, USA).	StataCorp		Suggestion: Stata, RRID:SCR_012763(link)

SciScore is an automated tool that is designed to assist expert reviewers by finding and presenting formulaic information scattered throughout a paper in a standard, easy to digest format. ***SciScore is not a substitute for expert review.*** SciScore also checks for the presence and correctness of several unique identifiers, including RRIDs (research resource identifiers) in the manuscript, detects sentences that appear to be missing RRIDs, and can even suggest RRIDs under certain circumstances. **All RRID suggestions should be verified;** only the author can know whether the suggestions are correct.
