SciScore Report

Below you will find your SciScore report containing three tables. Your score is calculated based on adherence to scientific rigor criteria (Table 1) and identification of key biological resources (Table 2). Table 3 contains statistical tests and oligonucleotides but is not scored. If SciScore makes any mistakes, please contact us to help us learn and improve.

Table 1: Rigor Adherence Table

Ethics
IRB: The study was approved by institutional ethical committee.
Inclusion and Exclusion Criteria
All patients either admitted or referred with at least 2 episodes of unprovoked seizures were eligible for inclusion to fulfill the criteria of epilepsy and the episodes were ideally to be stereotyped and eye- witness account was mandatory.
Attrition
not detected.
Sex as a biological variable
not detected.
Subject Demographics
Age: Patients with single episode of seizures, and provoked attacks secondary to metabolic or toxic encephalopathy were excluded as well as those below 12 years of age.
Randomization
not detected.
Blinding
not detected.
Power Analysis
not detected.
Replication
not required.

Table 2: Key Resources Table

Your Sentences	REAGENT or RESOURCE	SOURCE	IDENTIFIER
Software and Algorithms			
Data was entered and analyzed by the IBM SPSS Statistics for Windows version 20.0 (IBMCorp, Armonk, NY, USA).	SPSS		Suggestion: SPSS, RRID:SCR_002865(link)

SciScore is an automated tool that is designed to assist expert reviewers by finding and presenting formulaic information scattered throughout a paper in a standard, easy to digest format. ***SciScore is not a substitute for expert review.*** SciScore also checks for the presence and correctness of several unique identifiers, including RRIDs (research resource identifiers) in the manuscript, detects sentences that appear to be missing RRIDs, and can even suggest RRIDs under certain circumstances. **All RRID suggestions should be verified;** only the author can know whether the suggestions are correct.
