SciScore Report

Below you will find your SciScore report containing three tables. Your score is calculated based on adherence to scientific rigor criteria (Table 1) and identification of key biological resources (Table 2). Table 3 contains statistical tests and oligonucleotides but is not scored. If SciScore makes any mistakes, please contact us to help us learn and improve.

Table 1: Rigor Adherence Table

Ethics
not detected.
Inclusion and Exclusion Criteria
not required.
Attrition
not required.
Sex as a biological variable
Animal model Twenty-four Wistar male rats (150-160 g) were randomly divided into normoxic , hypoxic and hypoxic + SO2 groups (n = 6 each group) .
Subject Demographics
Weight: Animal model Twenty-four Wistar male rats (150-160 g) were randomly divided into normoxic , hypoxic and hypoxic + SO2 groups (n = 6 each group) .
Randomization
Animal model Twenty-four Wistar male rats (150-160 g) were randomly divided into normoxic , hypoxic and hypoxic + SO2 groups (n = 6 each group) .
Blinding
not detected.
Power Analysis
not detected.
Replication
not required.
Data Information

Identifiers: The concentration of forskolin 25 and SQ22536 used in the experiment was 30 mmolL .	SQ22536

Table 2: Key Resources Table

Your Sentences	REAGENT or RESOURCE	SOURCE	IDENTIFIER
Antibodies			
The primary antibodies used for the experiment were as follows: anti-AAT1 from Sigma, 1:1000 anti-AAT2 from Sigma, 1:1000 and anti-GAPDH from KangCheng, 1:4000.	anti-AAT2		
	anti-GAPDH		
The following day, the membrane was removed from 4 degC and incubated with the following secondary antibodies: goat anti-mouse IgG, 1:5000 rabbit anti-goat IgG, 1:2000 and goat anti-rabbit IgG, 1:2000.	anti-mouse IgG		
	anti-goat IgG		
	anti-rabbit IgG		
A total of 100 ml of the standard and samples were added to a microplate that was coated with polyclonal goat anti-mouse antibody.	anti-mouse		
The slide was incubated with the primary antibody (anti-cAMP, 1:100 anti-AAT1, 1:100) overnight at 4 degC.	anti-cAMP		
	anti-AAT1		
Experimental Models: Organisms/Strains			
Animal model Twenty-four Wistar male rats (150-160 g) were randomly divided into normoxic , hypoxic and hypoxic + SO2 groups (n = 6 each group) .	Wistar		Suggestion: RRID:RGD_13508588(link)
Software and Algorithms			
The L-glutamine , streptomycin penicillin and fetal bovine serum were purchased from Gibco (USA)	Gibco		
The primary antibodies used for the experiment were as follows: anti-AAT1 from Sigma, 1:1000 anti-AAT2 from Sigma, 1:1000 and anti-GAPDH from KangCheng, 1:4000.	Sigma		Suggestion: sigma-tau (RRID:SCR_000488)(link)
Statistical analysis The SPSS (20.0) software was used for statistical analysis.	SPSS		Suggestion: SPSS, RRID:SCR_002865(link)

Other Entities Detected

Your Sentences	Recognized Entity
Statistical Tests	
The difference between 2 groups was analyzed by an independent Students t-test.	t-test
A one-way analysis of variance (ANOVA) was used for the comparison of the differences among multiple groups following the Bonferroni post hoc test if the data were normally distributed, while the Dunnett T3 post hoc test followed ANOVA if the data were not normally distributed.	analysis of variance
	ANOVA
	Bonferroni post hoc test
	Dunnett T3 post hoc test
Pearsons correlation analysis was used to identify the dose-dependence effect.	Pearsons correlation

SciScore is an automated tool that is designed to assist expert reviewers by finding and presenting formulaic information scattered throughout a paper in a standard, easy to digest format. ***SciScore is not a substitute for expert review.*** SciScore also checks for the presence and correctness of several unique identifiers, including RRIDs (research resource identifiers) in the manuscript, detects sentences that appear to be missing RRIDs, and can even suggest RRIDs under certain circumstances. **All RRID suggestions should be verified;** only the author can know whether the suggestions are correct.
