SciScore Report

Below you will find your SciScore report containing three tables. Your score is calculated based on adherence to scientific rigor criteria (Table 1) and identification of key biological resources (Table 2). Table 3 contains statistical tests and oligonucleotides but is not scored. If SciScore makes any mistakes, please contact us to help us learn and improve.

Table 1: Rigor Adherence Table

Ethics
IRB: This study was determined to be exempt from review by our institutional review board (2018D-000744) .
Inclusion and Exclusion Criteria
In an effort to minimize curricular heterogeneity in our study population , only ACGME-accredited programs were included , and exclusively osteopathic programs were excluded from our study population .
Attrition
not detected.
Sex as a biological variable
not detected.
Subject Demographics
Age: not detected.
Weight: not detected.
Randomization
not detected.
Blinding
not detected.
Power Analysis
not detected.
Replication
not required.

Table 2: Key Resources Table

Your Sentences	REAGENT or RESOURCE	SOURCE	IDENTIFIER
Software and Algorithms			
The figures were produced using the package ggplot2 13.	ggplot2		Suggestion: ggplot2 (RRID:SCR_014601)(link)

Other Entities Detected

Your Sentences	Recognized Entity
Statistical Tests	
We used the Fisher exact test to evaluate the difference between programs that do and do not utilize LAA and variables such as region of residency , length of residency program training , and educational background.	Fisher exact test
We used the Mann-Whitney test to evaluate the mean procedure-specific ranking of various training modalities , while comparing respondent sites that do and do not utilize LAA .	Mann-Whitney test

SciScore is an automated tool that is designed to assist expert reviewers by finding and presenting formulaic information scattered throughout a paper in a standard, easy to digest format. ***SciScore is not a substitute for expert review.*** SciScore also checks for the presence and correctness of several unique identifiers, including RRIDs (research resource identifiers) in the manuscript, detects sentences that appear to be missing RRIDs, and can even suggest RRIDs under certain circumstances. **All RRID suggestions should be verified;** only the author can know whether the suggestions are correct.
