SciScore Report

Below you will find your SciScore report containing three tables. Your score is calculated based on adherence to scientific rigor criteria (Table 1) and identification of key biological resources (Table 2). Table 3 contains statistical tests and oligonucleotides but is not scored. If SciScore makes any mistakes, please contact us to help us learn and improve.

Table 1: Rigor Adherence Table

Ethics
Field Sample Permit: Eighteen CSA stakeholders, including specialists from the Council for Scientific and Industrial Research (5), department of agriculture (1), non-governmental organization1 (4), Ghana national association of farmers and fishermen (1), Ministry of Food and Agriculture (MoFA) (3), Climate Change Agriculture and Food Security (CCAFS) program (1), national development planning commission (1) and farmers (2) were engaged in the CSA_PF workshop (Table A1).
IRB: The approval was provided by CIATs Institutional Review Board (IRB) that this experiment was conducted as per the established guidelines and regulations and that informed consent was obtained from the survey participants .
Consent: The approval was provided by CIATs Institutional Review Board (IRB) that this experiment was conducted as per the established guidelines and regulations and that informed consent was obtained from the survey participants .
Inclusion and Exclusion Criteria
not detected.
Attrition
not detected.
Sex as a biological variable
In terms of Gender, the composition comprised 14 men and 4 women.
Subject Demographics
Age: not detected.
Weight: not detected.
Randomization
The researcher then randomly selected seven seed2 farmers , from the sampling frame , who had satisfied the targeted criteria of having implemented at least one of the seven CSA practices in the cereal-legume small ruminant farming system for a period of at least two to five years .
Blinding

not detected.
Power Analysis
not detected.
Replication
not required.

Table 2: Key Resources Table

Your Sentences	REAGENT or RESOURCE	SOURCE	IDENTIFIER
Software and Algorithms			
In this study , on-farm biodiversity was assessed using sustainability monitoring and assessment routine (SMART) farm tool (see Schader et al. , 2016 for more details) where biodiversity is reflected as a theme that encompasses other sub-themes (e.g. , species-diversity) (Gabel et al. , 2018) .	SMART		

SciScore is an automated tool that is designed to assist expert reviewers by finding and presenting formulaic information scattered throughout a paper in a standard, easy to digest format. ***SciScore is not a substitute for expert review.*** SciScore also checks for the presence and correctness of several unique identifiers, including RRIDs (research resource identifiers) in the manuscript, detects sentences that appear to be missing RRIDs, and can even suggest RRIDs under certain circumstances. **All RRID suggestions should be verified;** only the author can know whether the suggestions are correct.
