SciScore Report

Below you will find your SciScore report containing three tables. Your score is calculated based on adherence to scientific rigor criteria (Table 1) and identification of key biological resources (Table 2). Table 3 contains statistical tests and oligonucleotides but is not scored. If SciScore makes any mistakes, please contact us to help us learn and improve.

Table 1: Rigor Adherence Table

Ethics
Consent: All patients gave informed consent in accordance with the Declaration of Helsinki and according to the rules directed by the Institutional Review Board of Peking University People's Hospital.
IRB: All patients gave informed consent in accordance with the Declaration of Helsinki and according to the rules directed by the Institutional Review Board of Peking University People's Hospital.
Inclusion and Exclusion Criteria
Other inclusion criteria included sufficient cardiac function, lung diffusion capacity of at least 80%, transaminases level less than three times of the upper limit of normal, and creatinine clearance greater than 70 mL/min.
Attrition
not detected.
Sex as a biological variable
not detected.
Subject Demographics
Age: not detected.
Weight: not detected.
Randomization
Because pre-HSCT treatment with cytoreduction or BSC was not allocated through randomization, a 1:1 ratio PSM analysis was conducted using nearest neighbor or exact matching of age, sex, WHO disease stage, cytogenetics, interval between diagnosis and HSCT, and donor source.
Blinding
not detected.
Power Analysis
not detected.

Replication
not required.

Table 2: Key Resources Table

Your Sentences	REAGENT or RESOURCE	SOURCE	IDENTIFIER
Software and Algorithms			
The SPSS software package (version 22.0, SPSS Inc., Chicago, IL, USA) and R statistical software (Bell Labs, New York, NY, USA) were used for data analyses.	SPSS		Suggestion: SPSS, RRID:SCR_002865(link)

Other Entities Detected

Your Sentences	Recognized Entity
Statistical Tests	
2.7 Statistical analysis The probabilities of OS and RFS were calculated using the Kaplan-Meier estimator with the log-rank test.	log-rank test

SciScore is an automated tool that is designed to assist expert reviewers by finding and presenting formulaic information scattered throughout a paper in a standard, easy to digest format. ***SciScore is not a substitute for expert review.*** SciScore also checks for the presence and correctness of several unique identifiers, including RRIDs (research resource identifiers) in the manuscript, detects sentences that appear to be missing RRIDs, and can even suggest RRIDs under certain circumstances. **All RRID suggestions should be verified;** only the author can know whether the suggestions are correct.
