SciScore Report

Below you will find your SciScore report containing three tables. Your score is calculated based on adherence to scientific rigor criteria (Table 1) and identification of key biological resources (Table 2). Table 3 contains statistical tests and oligonucleotides but is not scored. If SciScore makes any mistakes, please contact us to help us learn and improve.

Table 1: Rigor Adherence Table

Ethics
Field Sample Permit: 3.4 Impact on food security Food security is defined by the Food and Agriculture Organization (FAO) as having four interrelated elements: availability, access, utilization and stability (McGuire, 2015).
Inclusion and Exclusion Criteria
not required.
Attrition
not required.
Sex as a biological variable
not required.
Subject Demographics
Age: not required.
Weight: not required.
Randomization
To mimic the situation where Vietnam is an open economy, thus being exposed to exogenous shocks in the world market, we propose a stochastic optimization dynamic problem in equation (1): (1) max $0 \leq r \leq 1$ # $\sum t = 1 T \{ (1 1 + \rho) t - 1 E u \{ [GDP t (r) - GDP t (r = 0)] \mid u \} \}$ where ρ is a discount rate; E is an expectation operator; u are random noises caused by exogenous factors; t is a time index in a yearly step; T = 10 is the actual planning horizon in Vietnam; r is a conversion ratio which remains constant throughout the planning horizon as per Vietnam's policy-making practice; GDP t (r = 0) is the real GDP at year t when no rice land is converted at all.
Blinding
not detected.
Power Analysis
not detected.

Replication
not required.

Table 2: Key Resources Table

Your Sentences	REAGENT or RESOURCE	SOURCE	IDENTIFIER
Software and Algorithms			
In particular, we obtain estimates from existing studies for some parameters and use this information together with SAM to calibrate the remaining parameters, while solving for the values of endogenous variables.	SAM		Suggestion: SAM (RRID:SCR_010951)(link)

SciScore is an automated tool that is designed to assist expert reviewers by finding and presenting formulaic information scattered throughout a paper in a standard, easy to digest format. ***SciScore is not a substitute for expert review.*** SciScore also checks for the presence and correctness of several unique identifiers, including RRIDs (research resource identifiers) in the manuscript, detects sentences that appear to be missing RRIDs, and can even suggest RRIDs under certain circumstances. **All RRID suggestions should be verified;** only the author can know whether the suggestions are correct.

For a full description of scored criteria and tips for improving your score, please see https://www.scicrunch.com/sciscorereport-faq
