Document Identifier: **PMC8107638**

SciScore Report

Below you will find your SciScore report containing three tables. Your score is calculated based on adherence to scientific rigor criteria (Table 1) and identification of key biological resources (Table 2). Table 3 contains statistical tests and oligonucleotides but is not scored. If SciScore makes any mistakes, please contact us to help us learn and improve.

Table 1: Rigor Adherence Table

Ethics
Consent: The datasets linked to the EDI used unique encoded identifiers and were analyzed at ICES, an independent, non-profit research institute whose legal status under Ontarios health information privacy law allows it to collect and analyze health care and demographic data from designated health information custodians, without individual consent, for health system evaluation and improvement.
Inclusion and Exclusion Criteria
Individuals were excluded if their EDI data did not have a minimum number of questions completed (i.e. valid for inclusion filter created by EDI developers that flags useable records) 23 .
Attrition
not detected.
Sex as a biological variable
Sociodemographic risk factors were derived from both the childs and, for those born in Ontario, their mothers encounters with the health system, and involved linkages with census, physician billing, hospitalization, immigration, Ontario Drug Benefit program, and the Narcotic Monitoring System sources 25, 38.
Subject Demographics
Age: Methods Study design and setting This was a population-based linkage study of kindergarten-aged children (ages 5 to 6 years) with a completed EDI record in 2015 using health data routinely collected from the publicly funded universal healthcare system and other administrative data available in Ontario, Canada.
Weight: Because extreme prematurity (<28 weeks gestation) and extremely low birth weight (<1500 grams) can contribute to significant neurodevelopmental morbidity , these risk factors were given double the weight of children born preterm at 28 to <=36 weeks gestation or low birth weight at 1500 to < 2500 grams , and counted as two risk factors each .
Randomization
not detected.
Blinding
not detected.
Power Analysis

not detected.
Replication
not required.

Table 2: Key Resources Table

Your Sentences	REAGENT or RESOURCE	SOURCE	IDENTIFIER

SciScore is an automated tool that is designed to assist expert reviewers by finding and presenting formulaic information scattered throughout a paper in a standard, easy to digest format. ***SciScore is not a substitute for expert review.*** SciScore also checks for the presence and correctness of several unique identifiers, including RRIDs (research resource identifiers) in the manuscript, detects sentences that appear to be missing RRIDs, and can even suggest RRIDs under certain circumstances. **All RRID suggestions should be verified;** only the author can know whether the suggestions are correct.
