SciScore Report

Below you will find your SciScore report containing three tables. Your score is calculated based on adherence to scientific rigor criteria (Table 1) and identification of key biological resources (Table 2). Table 3 contains statistical tests and oligonucleotides but is not scored. If SciScore makes any mistakes, please contact us to help us learn and improve.

Table 1: Rigor Adherence Table

Ethics
IRB: Patients and methods Study population The present retrospective comparative study complied with National Institutes of Health guidelines and was approved by the Clinical Research Ethics Committee of Tongji Hospital Affiliated to Tongji University (Ethical permit number: 2016-LC-008).
Consent: All participants provided written informed consent for study inclusion.
Inclusion and Exclusion Criteria
The exclusion criteria were as follows: (1) thrombosis in the LA or LA appendage (2) moderate to severe rheumatic mitral stenosis (3) mechanical mitral valve (4) severe bloodstream infection (5) severe heart failure with New York Heart Association clinical classification stage III-IV (6) severe hepatic or renal insufficiency (7) advanced stage cancer or (8) pregnancy.
Attrition
not detected.
Sex as a biological variable
not detected.
Subject Demographics
Age: Existing databases were then searched for patients who met the following criteria for study inclusion: (1) symptomatic PAF that failed to respond to medication (2) aged between 18 and 80 years and (3) received radiofrequency catheter ablation therapy.
Randomization
not detected.
Blinding
not detected.
Power Analysis
not detected.
Replication

not required.

Table 2: Key Resources Table

Your Sentences	REAGENT or RESOURCE	SOURCE	IDENTIFIER
Software and Algorithms			
A P-value < 0.05 was considered to be statistically significant and all statistical analyses were performed with SPSS software, version 22.0 (IBM, Armonk, NY, USA).	SPSS		Suggestion: SPSS, RRID:SCR_002865(link)

Other Entities Detected

Your Sentences	Recognized Entity
Statistical Tests	
Categorical variables were compared using kh2-test, the CHA2DS2-VASc and HAS-BLED scores were compared using Mann-Whitney U-test, and Students t-test was used to analyse the differences in continuous variables between patients with and without AF recurrence.	Mann-Whitney U-test
	t-test

SciScore is an automated tool that is designed to assist expert reviewers by finding and presenting formulaic information scattered throughout a paper in a standard, easy to digest format. ***SciScore is not a substitute for expert review.*** SciScore also checks for the presence and correctness of several unique identifiers, including RRIDs (research resource identifiers) in the manuscript, detects sentences that appear to be missing RRIDs, and can even suggest RRIDs under certain circumstances. **All RRID suggestions should be verified;** only the author can know whether the suggestions are correct.
