Document Identifier: **PMC8118359**

SciScore Report

Below you will find your SciScore report containing three tables. Your score is calculated based on adherence to scientific rigor criteria (Table 1) and identification of key biological resources (Table 2). Table 3 contains statistical tests and oligonucleotides but is not scored. If SciScore makes any mistakes, please contact us to help us learn and improve.

Table 1: Rigor Adherence Table

Ethics
IRB: The PREVEND study was approved by the local medical ethics committee, University Medical Center Groningen (approval number: MEC96/01/022) and was performed according to the principles outlined in the Declaration of Helsinki.
Consent: All participants gave written informed consent.
Inclusion and Exclusion Criteria
Individuals with missing data on diabetes and follow-up and those with missing NMR or covariate data at baseline were excluded, leaving 308 subjects with preexisting diabetes and 4828 subjects without diabetes at baseline of the present study.
Attrition
not detected.
Sex as a biological variable
Briefly, after exclusion of individuals using insulin and pregnant women, 7768 subjects with urinary albumin concentration ≥10 mg/L and 2592 individuals with urinary albumin concentration <10 mg/L were invited to participate in the study.
Subject Demographics
Age: Methods Study Design and Participants This study was conducted within the framework of the Prevention of Renal and Vascular ENd-stage Disease (PREVEND) study, a prospective Dutch cohort study in a general population among inhabitants, aged from 28 to 75 years, of the city Groningen, the Netherlands.
Weight: For predictors of which the interaction test was significant, we performed subgroup analyses in HRs across categories of prespecified subject characteristics, including BMI (<30 kg/m2 vs ≥30 kg/m2), sex (men vs women), and HOMA-IR (continuous and < median vs ≥ median value) in all 5 adjusted models.
Randomization
6 mg/dL); (2) random sample plasma glucose ≥11.1 mmol/L (200 mg/dL); (3) self-report of a physician diagnosis of T2D; and (4) initiation of glucose-lowering medication use, retrieved from a central pharmacy registry.

Blinding
not detected.
Power Analysis
not detected.
Replication
not required.

Table 2: Key Resources Table

Your Sentences	REAGENT or RESOURCE	SOURCE	IDENTIFIER
Software and Algorithms			
Statistical Analyses All analyses were conducted with the use of the statistical packages IBM SPSS (version 24.0.1; SPSS, Chicago, IL, USA) and STATA/SE (version 14; StataCorp, College Station, TX, USA).	SPSS		Suggestion: SPSS, RRID:SCR_002865(link)
	StataCorp		Suggestion: Stata, RRID:SCR_012763(link)

Other Entities Detected

Your Sentences	Recognized Entity
Statistical Tests	
Continuous variables were compared by using one-way ANOVA or a Kruskal Wallis test for skewed variables with subsequent Bonferroni correction, and a X 2 tests for categorical variables to test for differences across participants with preexisting diabetes, and with and without incident T2D.	ANOVA
	Kruskal Wallis test
	Bonferroni
	X 2 tests
Univariate as well as multivariate Pearson correlation coefficients were estimated to assess the cross-sectional correlations of HDL variables (HDL-C, HDL-P, large, medium, and small HDL particles, and HDL size) and HDL subspecies (H1-H7) with participants' characteristics and laboratory parameters.	Pearson correlation

SciScore is an automated tool that is designed to assist expert reviewers by finding and presenting formulaic information scattered throughout a paper in a standard, easy to digest format. ***SciScore is not a substitute for expert review.*** SciScore also checks for the presence and correctness of several unique identifiers, including RRIDs (research resource identifiers) in the manuscript, detects sentences that appear to be missing RRIDs, and can even suggest RRIDs under certain circumstances. **All RRID suggestions should be verified;** only the author can know whether the suggestions are correct.
