SciScore Report

Below you will find your SciScore report containing three tables. Your score is calculated based on adherence to scientific rigor criteria (Table 1) and identification of key biological resources (Table 2). Table 3 contains statistical tests and oligonucleotides but is not scored. If SciScore makes any mistakes, please contact us to help us learn and improve.

Table 1: Rigor Adherence Table

Ethics
IRB: Methods IRB exemption was declared from Duke University Medical Center Institutional Review Board since it met the criteria of exemption 2ii of the Revised Common Rule.
Inclusion and Exclusion Criteria
not detected.
Attrition
not detected.
Sex as a biological variable
Statistical Analysis The three variables of interest included gender (male vs female), age based on two generational groups based on year of birth: generation Y (1982-2001) or older generations (prior to 1982), and physician status (physician vs non-physician).
Subject Demographics
Age: not detected.
Weight: not detected.
Randomization
Two types of linear mixed models were fit for gaps in scores with a random intercept to account for the correlation in the same participant.
Blinding
not detected.
Power Analysis
not detected.
Replication
not required.

Table 2: Key Resources Table

Your Sentences	REAGENT or RESOURCE	SOURCE	IDENTIFIER

SciScore is an automated tool that is designed to assist expert reviewers by finding and presenting formulaic information scattered throughout a paper in a standard, easy to digest format. ***SciScore is not a substitute for expert review.*** SciScore also checks for the presence and correctness of several unique identifiers, including RRIDs (research resource identifiers) in the manuscript, detects sentences that appear to be missing RRIDs, and can even suggest RRIDs under certain circumstances. **All RRID suggestions should be verified;** only the author can know whether the suggestions are correct.
