Document Identifier: **PMC8127161**

SciScore Report

Below you will find your SciScore report containing three tables. Your score is calculated based on adherence to scientific rigor criteria (Table 1) and identification of key biological resources (Table 2). Table 3 contains statistical tests and oligonucleotides but is not scored. If SciScore makes any mistakes, please contact us to help us learn and improve.

Table 1: Rigor Adherence Table

Ethics
IRB: Collection of the data was approved by the ethics committee of the Northern Ostrobothnia Hospital District.
IACUC: The study followed institutional guidelines of the local ethics committee (CMO region Arnhem-Nijmegen, The Netherlands).
Inclusion and Exclusion Criteria
not detected.
Attrition
not detected.
Sex as a biological variable
The dataset includes 37 male and 66 female participants with a narrow age range (20–23 years, mean = 21.52, SD = 0.57).
Subject Demographics
Age: The dataset includes 37 male and 66 female participants with a narrow age range (20–23 years, mean = 21.52, SD = 0.57).
Randomization
Importantly, the trial order was fully randomized, which made the data suited for applying the randomization test.
Blinding
not detected.
Power Analysis
not detected.
Replication
not required.

Data Information	
Availability: The preprocessed resting state fMRI data and the library of MATLAB functions will be publicly available at https://doi.org/10.34973/zw83-tn77 only after the paper is published.	
Identifiers: 2.5 Replicating and extending our simulation study For the purpose of replicating and extending our simulation study, we have shared the preprocessed fMRI data and the code (a MATLAB script and a library of functions) that were used to produce the results of this simulation study (see https://doi.org/10.34973/zw83-tn77).	https://doi.org/10.34973/zw83-tn77

Table 2: Key Resources Table

Your Sentences	REAGENT or RESOURCE	SOURCE	IDENTIFIER
Software and Algorithms			
2 METHODS 2.1 Data In our simulation study, we used resting state fMRI data from 103 healthy controls from Oulu dataset in the 1000 Functional Connectomes Project (Biswal et al., 2010) were used for all analyses (http://fcon_1000.projects.nitrc.org/fcpClassic/FcpTable.html).	http://fcon_1000.projects.nitrc.org/fcpClassic/FcpTable.html		
1 (FMRIB Software Library; Oxford, UK; www.fmrib.ox.ac.uk/fsl), as described in Richter and de Lange (2019).	FMRIB		Suggestion: FSL, RRID:SCR_002823(link)
The script was shared as a Life Script, a MATLAB format that is specifically designed for documenting code.	MATLAB		Suggestion: MATLAB, RRID:SCR_001622(link)

SciScore is an automated tool that is designed to assist expert reviewers by finding and presenting formulaic information scattered throughout a paper in a standard, easy to digest format. ***SciScore is not a substitute for expert review.*** SciScore also checks for the presence and correctness of several unique identifiers, including RRIDs (research resource identifiers) in the manuscript, detects sentences that appear to be missing RRIDs, and can even suggest RRIDs under certain circumstances. **All RRID suggestions should be verified;** only the author can know whether the suggestions are correct.

For a full description of scored criteria and tips for improving your score, please see https://www.scicrunch.com/sciscorereport-faq
