Document Identifier: **PMC8129858**

SciScore Report

Below you will find your SciScore report containing three tables. Your score is calculated based on adherence to scientific rigor criteria (Table 1) and identification of key biological resources (Table 2). Table 3 contains statistical tests and oligonucleotides but is not scored. If SciScore makes any mistakes, please contact us to help us learn and improve.

Table 1: Rigor Adherence Table

Ethics
not required.
Inclusion and Exclusion Criteria
Criteria for inclusion in the study were (1) presence of ADNC, (2) presence of LBP, or (3) a combination of both pathologies on neuropathological evaluation (ADLBP).
Attrition
One hundred patients were excluded, and we included 37 patients with pure ADNC, 7 patients with pure LBP, and 37 patients with ADLBP (Table 1) in the final sample.
Sex as a biological variable
not required.
Subject Demographics
Age: not required.
Weight: not required.
Randomization
not detected.
Blinding
not detected.
Power Analysis
not detected.
Replication
not required.

Table 2: Key Resources Table

Your Sentences	REAGENT or RESOURCE	SOURCE	IDENTIFIER
Antibodies			
Standard immunohistochemistry (IHC) was performed using the Dako Omnis automated staining system with primary antibodies against alpha-synuclein (a- syn Thermo Scientific 1:10,000 after microwave antigen retrieval), Ab (DAKO 1:100 with initial incubation for 3 hours at room temperature), hyperphosphorylated tau (clone AT-8 Innogenetics 1:2000 after microwave antigen retrieval), phosphorylation-independent TDP-43 (ProteinTech 1:1000 after microwave antigen retrieval), and ubiquitin (DAKO 1:500 after microwave antigen retrieval).	antibodies against alpha-synuclein		
	phosphorylation-independent TDP-43		
	ubiquitin		
Software and Algorithms			
RESEARCH IN CONTEXT Systematic review: The authors reviewed the literature using traditional databases (e.g., PubMed) for articles and presentation at meetings.	PubMed		Suggestion: PubMed (RRID:SCR_004846)(link)
The severity of senile neuritic plaque pathology was staged according to Consortium to Establish a Registry for Alzheimers Disease (CERAD) recommendations. 10 Extent of tau pathology was staged according to Braak et al. 11 , 12 The severity of ADNC was semi-quantitatively categorized as mild, moderate, and severe as described in Table 1.	CERAD		Suggestion: CERAD - Consortium to Establish a Registry for Alzheimer's Disease (RRID:SCR_003016)(link)

Other Entities Detected

Your Sentences	Recognized Entity
Statistical Tests	
The severity of a-syn pathology was compared between patients with and without autonomic dysfunction using a t test.	t test
The prevalence of LBP was compared between the two groups with Chi-square test.	Chi-square test
We used analysis of variance (ANOVA) to compare continuous variables and Pearsons Chi-square test to compare categorical variables.	analysis of variance
	ANOVA
MMSE scores at presentation were compared using analysis of covariance (ANCOVA) with the age of onset of cognitive symptoms as a covariate.	analysis of covariance
	ANCOVA
For ANOVA and ANCOVA analyses, we used Bonferroni correction for multiple comparisons.	Bonferroni
We performed pairwise comparisons with Tukeys post hoc test.	Tukeys post hoc test
Pairwise comparisons of survival between groups were performed using log-rank test with Bonferroni correction for multiple comparisons.	log-rank test
We compared the frequency of LBP and the severity of a-syn deposition in brainstem nuclei between patients with autonomic dysfunction and matched controls using Pearsons Chi-square test and unpaired t test.	Pearsons Chi-square test

SciScore is an automated tool that is designed to assist expert reviewers by finding and presenting formulaic information scattered throughout a paper in a standard, easy to digest format. ***SciScore is not a substitute for expert review.*** SciScore also checks for the presence and correctness of several unique identifiers, including RRIDs (research resource identifiers) in the manuscript, detects sentences that appear to be missing RRIDs, and can even suggest RRIDs under certain circumstances. **All RRID suggestions should be verified;** only the author can know whether the suggestions are correct.
