SciScore Report

Below you will find your SciScore report containing three tables. Your score is calculated based on adherence to scientific rigor criteria (Table 1) and identification of key biological resources (Table 2). Table 3 contains statistical tests and oligonucleotides but is not scored. If SciScore makes any mistakes, please contact us to help us learn and improve.

Table 1: Rigor Adherence Table

Ethics
Consent: Randomization , patient intake , informed consent , baseline data collection , and monthly survey data collection are completed using the Patient Engaged Electronic Reporting System (
IRB: However, serious adverse events are monitored and, if study-related, reported to the principal investigator (PI) as soon as they occur, and to the central Investigational Review Board (IRB) within 5 working days.
Inclusion and Exclusion Criteria
We do exclude patients with known Chronic Obstructive Pulmonary Disease (COPD), unless they meet the lung function and smoking history criteria outlined in Table 3.
Attrition
Two of these, fractional exhaled nitric oxide (FeNO) and blood eosinophils, were added as assessments as an adaptive modification to the study protocol, in response to the increased focus on asthma phenotyping and biomarker analysis.
Sex as a biological variable
not detected.
Subject Demographics
Age: Study participants and sites PREPARE is enrolling 1200 adult (age 18-75) participants with asthma, who self-identify as AAB (n = 600) or HL (n = 600).
Randomization
Study overview and goal The PREPARE study is a randomized, open-label, pragmatic trial in AAB and HL adults with asthma.
Blinding
All possible asthma exacerbation events are adjudicated by a group of clinicians blinded to participant randomization status , based on pre-specified rules for adjudication , using all sources of data available.
Power Analysis
not detected.

Replication
not required.
Code Information
Availability: Participants view a video , co-developed with our patient partners , that gives education on asthma and explains how and why to use the PARTICS medications (video available upon request) .

Table 2: Key Resources Table

Your Sentences	REAGENT or RESOURCE	SOURCE	IDENTIFIER
Recombinant DNA			
PEERS(r)) , a Health Insurance Portability and Accountability Act (HIPAA)-compliant electronic data capture and study management system developed by the University of Colorado Department of Family Medicine. 2.4 . Intervention: PARTICS Participants randomized to the PARTICS intervention are provided a pressurized metered-dose inhaler (pMDI) containing the ICS beclomethasone dipropionate hydrofluoroalkane (HFA) 80 mg (QVAR(r) prior to December 2018 , QVAR(r) RediHaler(tm) thereafter Teva Respiratory , LLC) , and are instructed to use one puff of ICS for every puff of reliever inhaler used as needed , and 5 puffs of ICS for every reliever nebulizer treatment used as needed.	pMDI		

SciScore is an automated tool that is designed to assist expert reviewers by finding and presenting formulaic information scattered throughout a paper in a standard, easy to digest format. ***SciScore is not a substitute for expert review.*** SciScore also checks for the presence and correctness of several unique identifiers, including RRIDs (research resource identifiers) in the manuscript, detects sentences that appear to be missing RRIDs, and can even suggest RRIDs under certain circumstances. **All RRID suggestions should be verified;** only the author can know whether the suggestions are correct.
