SciScore Report

Below you will find your SciScore report containing three tables. Your score is calculated based on adherence to scientific rigor criteria (Table 1) and identification of key biological resources (Table 2). Table 3 contains statistical tests and oligonucleotides but is not scored. If SciScore makes any mistakes, please contact us to help us learn and improve.

Table 1: Rigor Adherence Table

Ethics	
Field Sample Permit: Most studies investigating MP occurrence in fish were conducted to understand if plastic was ingested by the species.	
Inclusion and Exclusion Criteria	
not required.	
Attrition	
not required.	
Sex as a biological variable	
not detected.	
Subject Demographics	
Age: Green histogram: child (1–18 years); pink histogram: adults (19–70 years) .	
Randomization	
not detected.	
Blinding	
not detected.	
Power Analysis	
not detected.	
Replication	
not required.	
Code Information	
Identifiers: Compiled databases from literature (Data S1–S6) are accessible in the following data depository: https://github.com/nhazimah/heasi.	https://github.com/nhazimah/heasi

Data Information	
Availability: A fraction of inhaled particles is assumed to be deposited in the nasopharyngeal cavity (f dep) and then swallowed in the GI tract.	
Identifiers: A positive change reflects an increased chemical concentration in the tissue due to chemical desorption from ingested MPs, whereas a negative change reflects a reduced concentration due to absorption of chemical from the GI tract by ingested MP. 30,71,88,89	30,71,88,89

Table 2: Key Resources Table

Your Sentences	REAGENT or RESOURCE	SOURCE	IDENTIFIER
Software and Algorithms			
Searches were performed until March 2020 using search engines Scopus and Google Scholar, and only studies reporting original concentration data were reviewed.	Google Scholar		Suggestion: Google Scholar (RRID:SCR_008878)(link)

SciScore is an automated tool that is designed to assist expert reviewers by finding and presenting formulaic information scattered throughout a paper in a standard, easy to digest format. ***SciScore is not a substitute for expert review.*** SciScore also checks for the presence and correctness of several unique identifiers, including RRIDs (research resource identifiers) in the manuscript, detects sentences that appear to be missing RRIDs, and can even suggest RRIDs under certain circumstances. **All RRID suggestions should be verified;** only the author can know whether the suggestions are correct.
