Document Identifier: **PMC8157817**

SciScore Report

Below you will find your SciScore report containing three tables. Your score is calculated based on adherence to scientific rigor criteria (Table 1) and identification of key biological resources (Table 2). Table 3 contains statistical tests and oligonucleotides but is not scored. If SciScore makes any mistakes, please contact us to help us learn and improve.

Table 1: Rigor Adherence Table

Ethics
IRB: The study is a part of the project that was approved by the Bioethics Committee at the Military Institute of Medicine (resolution No. 29WIM2017).
Consent: All patients gave their written informed consent to participate in the study.
Inclusion and Exclusion Criteria
Eligibility Criteria Inclusion criteria were age >=18 years, ESRD during HD or PD, duration of RRT >=3 months, and type 1 or type 2 diabetes for >=3 months.
Attrition
not detected.
Sex as a biological variable
not detected.
Subject Demographics
Age: Eligibility Criteria Inclusion criteria were age >=18 years, ESRD during HD or PD, duration of RRT >=3 months, and type 1 or type 2 diabetes for >=3 months.
Randomization
not detected.
Blinding
not detected.
Power Analysis
not detected.
Replication
not required.

Table 2: Key Resources Table

Your Sentences	REAGENT or RESOURCE	SOURCE	IDENTIFIER

Other Entities Detected

Your Sentences	Recognized Entity
Statistical Tests	
The normal distribution of the variables was checked by the Shapiro-Wilk test.	Shapiro-Wilk test
In assessing the differences between the study groups, the t test was used if the normal distribution criterion was met.	t test
Otherwise, the Mann-Whitney U test for quantitative non-parametric variables or chi-squared test for qualitative data was performed.	Mann-Whitney U test
	chi-squared test
For qualitative observations with sample sizes <5, the Fishers exact test was used.	Fishers exact test
Kaplan-Meyer survival analyses with log-rank tests were performed to show differences between groups.	log-rank tests

SciScore is an automated tool that is designed to assist expert reviewers by finding and presenting formulaic information scattered throughout a paper in a standard, easy to digest format. ***SciScore is not a substitute for expert review.*** SciScore also checks for the presence and correctness of several unique identifiers, including RRIDs (research resource identifiers) in the manuscript, detects sentences that appear to be missing RRIDs, and can even suggest RRIDs under certain circumstances. **All RRID suggestions should be verified;** only the author can know whether the suggestions are correct.

For a full description of scored criteria and tips for improving your score, please see https://www.scicrunch.com/sciscorereport-faq
