SciScore Report

Below you will find your SciScore report containing three tables. Your score is calculated based on adherence to scientific rigor criteria (Table 1) and identification of key biological resources (Table 2). Table 3 contains statistical tests and oligonucleotides but is not scored. If SciScore makes any mistakes, please contact us to help us learn and improve.

Table 1: Rigor Adherence Table

Ethics
IRB: This study was approved by the Ethics Committee of the participating institutions .
Inclusion and Exclusion Criteria
Our inclusion criteria were (1) pathologically diagnosed with lung adenocarcinoma according to the 2015 WHO Classification 23 (2) complete surgery specimen with clear pathological pattern (3) having not gone through radiotherapy or chemotherapy when received imaging screening (4) having preoperative chest CT images within one month before surgery.
Attrition
not detected.
Sex as a biological variable
not detected.
Subject Demographics
Age: not detected.
Weight: not detected.
Randomization
Dataset preparation We randomly allocated a dataset of 998 patients with lung adenocarcinoma from West China hospital into a training set (n = 802) and an internal validation cohort (n = 196) , while 224 patients from another two independent cohorts constituted the external validation group .
Blinding
Then two senior radiologists (with 10 years of work experience in thoracic imaging diagnosis) blindly and independently assessed the mask of all images , and any disagreements between two observers were resolved by discussion until a consensus was reached.
Power Analysis
not detected.
Replication

CT DICOM images within one month before operation were extracted from Picture Archiving and Communication System (PACS) , with duplicate or incomplete images were removed.
Number: CT DICOM images within one month before operation were extracted from Picture Archiving and Communication System (PACS) , with duplicate or incomplete images were removed.

Table 2: Key Resources Table

Your Sentences	REAGENT or RESOURCE	SOURCE	IDENTIFIER
Recombinant DNA			
In order to ensure the average distribution of the data of each category , 200 patients were randomly selected for each category except for the extremely rare AAH and pMAC .	pMAC		

Other Entities Detected

Your Sentences	Recognized Entity
Statistical Tests	
If the Pearsons correlation coefficient of a feature pair is >0.9 , one pair is removed.	Pearsons correlation
Statistical analysis To compare the clinical characteristics of patients among three datasets , continuous and categorical variables were evaluated by ANOVA and Chi-square test , respectively .	ANOVA
	Chi-square test

SciScore is an automated tool that is designed to assist expert reviewers by finding and presenting formulaic information scattered throughout a paper in a standard, easy to digest format. ***SciScore is not a substitute for expert review.*** SciScore also checks for the presence and correctness of several unique identifiers, including RRIDs (research resource identifiers) in the manuscript, detects sentences that appear to be missing RRIDs, and can even suggest RRIDs under certain circumstances. **All RRID suggestions should be verified;** only the author can know whether the suggestions are correct.

For a full description of scored criteria and tips for improving your score, please see https://www.scicrunch.com/sciscorereport-faq
