SciScore Report

Below you will find your SciScore report containing three tables. Your score is calculated based on adherence to scientific rigor criteria (Table 1) and identification of key biological resources (Table 2). Table 3 contains statistical tests and oligonucleotides but is not scored. If SciScore makes any mistakes, please contact us to help us learn and improve.

Table 1: Rigor Adherence Table

Ethics
not required.
Inclusion and Exclusion Criteria
Of these, 163 pregnant participants, 76 with incomplete demographic or examination data (besides household income and body mass index (BMI)), and 14 with no available information regarding diabetes were excluded.
Attrition
Of these, 163 pregnant participants, 76 with incomplete demographic or examination data (besides household income and body mass index (BMI)), and 14 with no available information regarding diabetes were excluded.
Sex as a biological variable
Of these, 163 pregnant participants, 76 with incomplete demographic or examination data (besides household income and body mass index (BMI)), and 14 with no available information regarding diabetes were excluded.
Subject Demographics
Age: The research sample comprised non-pregnant adults (aged 20 and older) who completed a depression screening questionnaire (Patient Health Questionnaire-9, PHQ-9) and underwent screening for diabetes with laboratory tests (fasting plasma glucose, HbA1c, plasma glucose 2 hours after 75 g oral glucose tolerance test) or a survey.
Weight: Participants were classified according to BMI into underweight (BMI <18.5), normal (18.5 ≤ BMI <25), overweight (25 ≤ BMI <30) and obese (BMI ≥30) groups, and those with missing BMI values were assigned to the unknown group.
Randomization
not detected.
Blinding
not detected.
Power Analysis
not detected.

Replication
not required.

Table 2: Key Resources Table

Your Sentences	REAGENT or RESOURCE	SOURCE	IDENTIFIER

Other Entities Detected

Your Sentences	Recognized Entity
Statistical Tests	
Multivariable logistic regression analyses and χ2 tests were used to identify the associations between the independent and dependent variables.	χ2 tests

SciScore is an automated tool that is designed to assist expert reviewers by finding and presenting formulaic information scattered throughout a paper in a standard, easy to digest format. ***SciScore is not a substitute for expert review.*** SciScore also checks for the presence and correctness of several unique identifiers, including RRIDs (research resource identifiers) in the manuscript, detects sentences that appear to be missing RRIDs, and can even suggest RRIDs under certain circumstances. **All RRID suggestions should be verified;** only the author can know whether the suggestions are correct.

For a full description of scored criteria and tips for improving your score, please see https://www.scicrunch.com/sciscorereport-faq
