SciScore Report

Below you will find your SciScore report containing three tables. Your score is calculated based on adherence to scientific rigor criteria (Table 1) and identification of key biological resources (Table 2). Table 3 contains statistical tests and oligonucleotides but is not scored. If SciScore makes any mistakes, please contact us to help us learn and improve.

Table 1: Rigor Adherence Table

Ethics
not required.
Inclusion and Exclusion Criteria
not required.
Attrition
not required.
Sex as a biological variable
not required.
Subject Demographics
Age: not required.
Weight: not required.
Randomization
To account for the influence of measurement error on the candidate rankings, we add to each screening value a Gaussian-distributed random number with zero mean and standard deviation corresponding to the experimental error.
Blinding
not detected.
Power Analysis
not detected.
Replication
not required.
Data Information

Identifiers: The TOPSIS method ranks on the fraction of the total distance (d - + d +) that arises from d - , referred to as the relative closeness 27,37,43,44 (4) d c = d - d - + d + The closeness dc is a nonlinear function of the distances d - and d + .	27,37,43,44

Table 2: Key Resources Table

Your Sentences	REAGENT or RESOURCE	SOURCE	IDENTIFIER
Antibodies			
For a subset of the antibody clones, immunohistochemistry (IHC) was also performed using frozen human brain sections without fixation or antigen retrieval, and samples were assessed for the absence of overt binding to plaque (B pla).	antigen retrieval,		
2.6 Generation of a synthetic validation dataset To test the method on a synthetic dataset, we generated hypothetical data for 100 candidates (e.g. antibodies) with 10 screening criteria.	e.g.		

SciScore is an automated tool that is designed to assist expert reviewers by finding and presenting formulaic information scattered throughout a paper in a standard, easy to digest format. ***SciScore is not a substitute for expert review.*** SciScore also checks for the presence and correctness of several unique identifiers, including RRIDs (research resource identifiers) in the manuscript, detects sentences that appear to be missing RRIDs, and can even suggest RRIDs under certain circumstances. **All RRID suggestions should be verified;** only the author can know whether the suggestions are correct.
