SciScore Report

Below you will find your SciScore report containing three tables. Your score is calculated based on adherence to scientific rigor criteria (Table 1) and identification of key biological resources (Table 2). Table 3 contains statistical tests and oligonucleotides but is not scored. If SciScore makes any mistakes, please contact us to help us learn and improve.

Table 1: Rigor Adherence Table

Ethics
IRB: Study areas were located in Som-Sung District (intervention group) and Num-Phong District (comparison group), Khon Kaen Province, Thailand. Intervention After the Institutional Review Board (IRB) approval, we met with participants and explained the study objective and procedures, including sample rights protection.
Consent: Signed informed consent was obtained from all participants willing to participate.
IACUC: Ethical Considerations This research study was approved by the Ethical Review Committee for Human Research of Faculty of Public Health, Mahidol University (Research Project Code No. MUPH 2017-139), dated June 20, 2017.
Inclusion and Exclusion Criteria
Older adults who had a history of psychiatric disorders and unable to speak and read the official language of Thailand were excluded from this study.
Attrition
not detected.
Sex as a biological variable
not detected.
Subject Demographics
Age: A total of 110 participants were selected using the criteria 1) aged 60 to 80 years and 2) living with family members aged 20 to 59 years who were literate.
Randomization
The study areas were selected by convenient sampling, and then participants were randomly selected in each group from name lists of primary health promoting centers (subdistrict health promoting hospitals).
Blinding
not detected.
Power Analysis

The sample size was calculated by using the G * power program to be 55 older adults with chronic diseases, including hypertension, diabetes, hyperlipidemia, and heart diseases in each study and comparison group.
Replication
not required.

Table 2: Key Resources Table

Your Sentences	REAGENT or RESOURCE	SOURCE	IDENTIFIER
Software and Algorithms			
The sample size was calculated by using the G * power program to be 55 older adults with chronic diseases, including hypertension, diabetes, hyperlipidemia, and heart diseases in each study and comparison group.	G * power		Suggestion: G*Power (RRID:SCR_013726)(link)
This study was conducted in accordance with the Declaration of Helsinki. Statistical Analysis Data were analyzed using the Statistical Package for the Social Sciences (SPSS), Version 21 for Windows (SPSS, Chicago, IL) for testing the assumptions, study variables, and outcomes.	Statistical Package for the Social Sciences		Suggestion: SPSS, RRID:SCR_002865(link)
	SPSS		Suggestion: SPSS, RRID:SCR_002865(link)

Other Entities Detected

Your Sentences	Recognized Entity
Statistical Tests	
Students t-test, chi-square, Fishers exact test, and repeated measure ANOVA analysis were performed to determine the associations between QOLs at different times.	t-test
	chi-square
	Fishers exact test
	ANOVA

SciScore is an automated tool that is designed to assist expert reviewers by finding and presenting formulaic information scattered throughout a paper in a standard, easy to digest format. ***SciScore is not a substitute for expert review.*** SciScore also checks for the presence and correctness of several unique identifiers, including RRIDs (research resource identifiers) in the manuscript, detects sentences that appear to be missing RRIDs, and can even suggest RRIDs under certain circumstances. **All RRID suggestions should be verified;** only the author can know whether the suggestions are correct.
