SciScore Report

Below you will find your SciScore report containing three tables. Your score is calculated based on adherence to scientific rigor criteria (Table 1) and identification of key biological resources (Table 2). Table 3 contains statistical tests and oligonucleotides but is not scored. If SciScore makes any mistakes, please contact us to help us learn and improve.

Table 1: Rigor Adherence Table

Ethics
IRB: Ethics Approval Ethical clearance and approval letter was obtained from the institutional review board of Jimma University, Institute of Health.
Consent: Informed written consent was obtained from each participant after describing the benefits and risks of the study.
Inclusion and Exclusion Criteria
However, those who were critically ill and unable to participate in the interview, pregnant women, patients with known renal disease before start of ART and also those who had an ART period of fewer than 6 months were excluded.
Attrition
Expecting an overall renal function impairment rate of 25.4%17 at a 95% confidence interval (CI), and after adding 5% of the calculated sample size for possible non-response, 352 patients were interviewed.
Sex as a biological variable
However, those who were critically ill and unable to participate in the interview, pregnant women, patients with known renal disease before start of ART and also those who had an ART period of fewer than 6 months were excluded.
Subject Demographics
Weight: Then, BMI of the participants was calculated as weight in kg divided by height in meters squared and subjects were considered as either underweight (BMI < 18.5 kg/m2), normal (BMI = 18.5–24.9 kg/m2) or overweight (BMI ≥ 25 kg/m2).
Randomization
The representative sample was selected using a systematic random sampling technique.
Blinding
not detected.
Power Analysis

not detected.
Replication
not required.

Table 2: Key Resources Table

Your Sentences	REAGENT or RESOURCE	SOURCE	IDENTIFIER
Software and Algorithms			
Data Processing and Analysis The responses from each study participant were analyzed using Statistical Package for the Social Sciences (SPSS) software version 22.0 for Windows (SPSS Inc., Chicago, IL) and were double-checked for accuracy.	Statistical Package for the Social Sciences		Suggestion: SPSS, RRID:SCR_002865(link)
	SPSS		Suggestion: SPSS, RRID:SCR_002865(link)

SciScore is an automated tool that is designed to assist expert reviewers by finding and presenting formulaic information scattered throughout a paper in a standard, easy to digest format. ***SciScore is not a substitute for expert review.*** SciScore also checks for the presence and correctness of several unique identifiers, including RRIDs (research resource identifiers) in the manuscript, detects sentences that appear to be missing RRIDs, and can even suggest RRIDs under certain circumstances. **All RRID suggestions should be verified;** only the author can know whether the suggestions are correct.

For a full description of scored criteria and tips for improving your score, please see https://www.scicrunch.com/sciscorereport-faq
