Document Identifier: **PMC8202269**

SciScore Report

Below you will find your SciScore report containing three tables. Your score is calculated based on adherence to scientific rigor criteria (Table 1) and identification of key biological resources (Table 2). Table 3 contains statistical tests and oligonucleotides but is not scored. If SciScore makes any mistakes, please contact us to help us learn and improve.

Table 1: Rigor Adherence Table

Ethics
Field Sample Permit: Access modality described the means of accessing the services of referred resources: direct, such as food pantries or assistive hotlines that provided immediate access to services via phone call or drop-in visit or indirect, such as public programs that required additional appointments or applications prior to accessing services.
Inclusion and Exclusion Criteria
not required.
Attrition
One of the most common screening tools in the United States, 26 PRAPARE consists of a validated set of national core measures integrated into the electronic health record (EHR), which include patient demographics (eg, race, ethnicity, education) and social needs (eg, housing stability, material security, stress).
Sex as a biological variable
not required.
Subject Demographics
Age: not required.
Weight: not required.
Randomization
not detected.
Blinding
not detected.
Power Analysis
not detected.
Replication

Standard errors for both the unadjusted and adjusted odds ratios (aORs) were estimated via bootstrap with 1000 replications to correct for bias due to overfitting.
Number: Standard errors for both the unadjusted and adjusted odds ratios (aORs) were estimated via bootstrap with 1000 replications to correct for bias due to overfitting.

Table 2: Key Resources Table

Your Sentences	REAGENT or RESOURCE	SOURCE	IDENTIFIER
Software and Algorithms			
All analyses were performed using Stata (Release 16 StataCorp LLC, College Station, TX).	StataCorp		Suggestion: Stata, RRID:SCR_012763(link)

Other Entities Detected

Your Sentences	Recognized Entity
Statistical Tests	
Bivariate analyses compared the prevalence of these characteristics between primary (connection success) and secondary outcome (connection attempt) groups, using appropriate non-parametric, 2-sided tests (Fishers exact test or the Mann-Whitney-Wilcoxon test).	Fishers exact test
	Mann-Whitney-Wilcoxon test

SciScore is an automated tool that is designed to assist expert reviewers by finding and presenting formulaic information scattered throughout a paper in a standard, easy to digest format. ***SciScore is not a substitute for expert review.*** SciScore also checks for the presence and correctness of several unique identifiers, including RRIDs (research resource identifiers) in the manuscript, detects sentences that appear to be missing RRIDs, and can even suggest RRIDs under certain circumstances. **All RRID suggestions should be verified;** only the author can know whether the suggestions are correct.
