SciScore Report

Below you will find your SciScore report containing three tables. Your score is calculated based on adherence to scientific rigor criteria (Table 1) and identification of key biological resources (Table 2). Table 3 contains statistical tests and oligonucleotides but is not scored. If SciScore makes any mistakes, please contact us to help us learn and improve.

Table 1: Rigor Adherence Table

Ethics
not required.
Inclusion and Exclusion Criteria
Inclusion criteria We included studies that used comparative and non-comparative study designs.
Attrition
not required.
Sex as a biological variable
Case series were included only if they reported on more than 50 exposed pregnant women.
Subject Demographics
Age: not required.
Weight: not required.
Randomization
For randomized controlled trials (RCTs), we analyzed the data on an intention to treat basis as far as possible (i.e., including all randomized participants in analysis, in the groups to which they were randomized).
Blinding
not detected.
Power Analysis
not detected.
Replication
not required.

Table 2: Key Resources Table

Your Sentences	REAGENT or RESOURCE	SOURCE	IDENTIFIER
Software and Algorithms			
METHODS For this rapid review, we followed the Cochrane methods10, 11 and the 2020 Preferred reporting items for systematic reviews and meta-analyses (PRISMA) statement12 for reporting results.	Cochrane		Suggestion: Cochrane Library (RRID:SCR_013000)(link)
We used the 21 standardized case definitions developed by the Global Alignment of Immunization Safety Assessment in Pregnancy (GAIA) of prioritized obstetric and neonatal outcomes based on the Brighton Collaboration process.	GAIA		Suggestion: GAIA (RRID:SCR_009182)(link)
Search strategy We searched published and unpublished studies without restrictions on language or publication status from inception to February 2021 (See Appendix 1) in the Cochrane Library databases, MEDLINE, EMBASE, Latin American and Caribbean Health Sciences Literature (LILACS), Science Citation Index Expanded (SCI-EXPANDED), China Network Knowledge Information (CNKI), WHO Database of publications on SARS CoV2, TOXLine, pre-print servers (ArXiv, BiorXiv, medRxiv, search.bioPreprint), and COVID-19 research websites (PregCOV-19LSR, Maternal and Child Health, Nutrition: John Hopkins Centre for Humanitarian health, the LOVE database).	Cochrane Library		Suggestion: Cochrane Library (RRID:SCR_013000)(link)
	MEDLINE		Suggestion: MEDLINE (RRID:SCR_002185)(link)
	EMBASE		Suggestion: EMBASE (RRID:SCR_001650)(link)
	ArXiv		Suggestion: arXiv (RRID:SCR_006500)(link)
	BiorXiv		Suggestion: bioRxiv (RRID:SCR_003933)(link)
We used the Cochrane EPOC group tools19 to assess controlled before-after studies (CBAs), nationwide uncontrolled before-after studies (UBAs), interrupted time series (ITSs) Controlled-ITSs (CITSs).	Cochrane EPOC		

SciScore is an automated tool that is designed to assist expert reviewers by finding and presenting formulaic information scattered throughout a paper in a standard, easy to digest format. ***SciScore is not a substitute for expert review.*** SciScore also checks for the presence and correctness of several unique identifiers, including RRIDs (research resource identifiers) in the manuscript, detects sentences that appear to be missing RRIDs, and can even suggest RRIDs under certain circumstances. **All RRID suggestions should be verified;** only the author can know whether the suggestions are correct.
