SciScore Report

Below you will find your SciScore report containing three tables. Your score is calculated based on adherence to scientific rigor criteria (Table 1) and identification of key biological resources (Table 2). Table 3 contains statistical tests and oligonucleotides but is not scored. If SciScore makes any mistakes, please contact us to help us learn and improve.

Table 1: Rigor Adherence Table

Ethics
not required.
Inclusion and Exclusion Criteria
not required.
Attrition
not required.
Sex as a biological variable
25 All women were asked to report their alcohol consumption since pregnancy recognition as there is no safe amount of alcohol during pregnancy.
Subject Demographics
Age: not required.
Weight: not required.
Randomization
A simple random sampling method was applied to select the controls by using the sampling frame of the controls obtained during the occurrence of the event (cases) that had happened.
Blinding
not detected.
Power Analysis
Sample Size Determination and Sampling Procedures A double population proportion formula was used to determine the sample size by using EPI Info version 7.2.1 by considering the following assumptions: power (80%), 95% Confidence Level (CL), case to control ratio (1:3), 10% non-response rate, exposure among controls, (80.1%), and COR=0.48.20 A total of 468 study participants, with 117 cases and 351 controls, were included in the study.
Replication

not required.

Table 2: Key Resources Table

Your Sentences	REAGENT or RESOURCE	SOURCE	IDENTIFIER
Software and Algorithms			
After the data were checked for completeness and accuracy, data were coded and then entered into Epi data version 4.4.2.1 and exported to Statistical Package for the Social Sciences (SPSS) version 25 for analysis.	Statistical Package for the Social Sciences		Suggestion: SPSS, RRID:SCR_002865(link)
	SPSS		Suggestion: SPSS, RRID:SCR_002865(link)

SciScore is an automated tool that is designed to assist expert reviewers by finding and presenting formulaic information scattered throughout a paper in a standard, easy to digest format. ***SciScore is not a substitute for expert review.*** SciScore also checks for the presence and correctness of several unique identifiers, including RRIDs (research resource identifiers) in the manuscript, detects sentences that appear to be missing RRIDs, and can even suggest RRIDs under certain circumstances. **All RRID suggestions should be verified;** only the author can know whether the suggestions are correct.
