SciScore Report

Below you will find your SciScore report containing three tables. Your score is calculated based on adherence to scientific rigor criteria (Table 1) and identification of key biological resources (Table 2). Table 3 contains statistical tests and oligonucleotides but is not scored. If SciScore makes any mistakes, please contact us to help us learn and improve.

Table 1: Rigor Adherence Table

Ethics
IRB: This study was approved by the UNC Institutional Review Board (UNC IRB 18-3339) and adhered to the ethical principles of the Declaration of Helsinki.
Consent: A waiver of informed consent was issued by the UNC Institutional Review Board.
Inclusion and Exclusion Criteria
Patients excluded from the study were those with no LN, or with LN class not specified because of insufficient data, and those with LN class II or class VI (because of the low prevalence).
Attrition
not detected.
Sex as a biological variable
not detected.
Subject Demographics
Age: not detected.
Weight: not detected.
Randomization
Multiple imputation was used to address missing covariate information with missing values assumed to be missing at random.
Blinding
not detected.
Power Analysis
not detected.
Replication
not required.

Table 2: Key Resources Table

Your Sentences	REAGENT or RESOURCE	SOURCE	IDENTIFIER
Antibodies			
Subsequent sensitivity analyses consisted of models with a more conservative VTE outcome and other covariates to consider the impact of missing data as follows: (i) VTE definition including only DVT or PE as the outcome modeled (ii) inclusion of antiphospholipid antibody positivity (lupus anticoagulant, anticardiolipin antibodies, andor anti-b2-glycoprotein-1 antibodies) as an additional covariate that was not included in the main analysis because of high level of missing data (39) and (iii) inclusion of thrombotic microangiopathy (TMA) as an additional covariate of interest.	antiphospholipid antibody positivity (lupus anticoagulant, anticardiolipin antibodies,		
	anti-b2-glycoprotein-1		

SciScore is an automated tool that is designed to assist expert reviewers by finding and presenting formulaic information scattered throughout a paper in a standard, easy to digest format. ***SciScore is not a substitute for expert review.*** SciScore also checks for the presence and correctness of several unique identifiers, including RRIDs (research resource identifiers) in the manuscript, detects sentences that appear to be missing RRIDs, and can even suggest RRIDs under certain circumstances. **All RRID suggestions should be verified;** only the author can know whether the suggestions are correct.

For a full description of scored criteria and tips for improving your score, please see https://www.scicrunch.com/sciscorereport-faq
