SciScore Report

Below you will find your SciScore report containing three tables. Your score is calculated based on adherence to scientific rigor criteria (Table 1) and identification of key biological resources (Table 2). Table 3 contains statistical tests and oligonucleotides but is not scored. If SciScore makes any mistakes, please contact us to help us learn and improve.

Table 1: Rigor Adherence Table

Ethics
Consent: A secured URL directed interested participants to an online screener and consent form.
Field Sample Permit: This method has been used by previous studies in the field of behavioural and educational research specialised in healthcare.
Inclusion and Exclusion Criteria
Eligible participants were directed to an availability form (qualitative phase) or to the online survey (quantitative phase).
Attrition
not detected.
Sex as a biological variable
Research criteria Participants were deemed eligible for the study if they: (1) practised in Germany (GER), the UK or the USA (2) were certified dermatologists or rheumatologists (3) were actively practising (ie, >=50 of time is spent caring for patients, primary practice is not researching or teaching and they are not retired) (4) had at least 3 years of clinical practice (5) had a minimum caseload (5) of female patients of reproductive age with either axSpA, PsA, PsO or RA and (6) had some experience prescribing biologics for the treatment of these conditions.
Subject Demographics
Age: not detected.
Weight: not detected.
Randomization
not detected.
Blinding
not detected.
Power Analysis

The sample size for the survey was calculated to reach a statistical power of 0.8 with a=0.05 and a large effect size (Cohens w=0.5) for 6x2 Kh2 tests.
Replication
42 Matrices were then developed to analyse themes by subgroup (eg, specialty).43 For each emerging theme, one or two representative quotes were selected. 10.1136bmjopen-2020-043960.supp2 Supplementary data Quantitative analysis Final survey data were transferred into a database (IBM SPSS Statistics for Windows, V.25.0) and cleaned to remove incomplete or duplicate cases.
Number: 42 Matrices were then developed to analyse themes by subgroup (eg, specialty).43 For each emerging theme, one or two representative quotes were selected. 10.1136bmjopen-2020-043960.supp2 Supplementary data Quantitative analysis Final survey data were transferred into a database (IBM SPSS Statistics for Windows, V.25.0) and cleaned to remove incomplete or duplicate cases.

Other Entities Detected

Your Sentences	Recognized Entity
Statistical Tests	
Kruskal-Wallis H tests, a non-parametric test that assigns a rank based on the value of a measured score, were used to assess statistically significant differences in mean rankings of confidence scores between subgroups.44 Therefore, lower ranks indicate lower confidence in a respective subgroup.	Kruskal-Wallis H tests

SciScore is an automated tool that is designed to assist expert reviewers by finding and presenting formulaic information scattered throughout a paper in a standard, easy to digest format. ***SciScore is not a substitute for expert review.*** SciScore also checks for the presence and correctness of several unique identifiers, including RRIDs (research resource identifiers) in the manuscript, detects sentences that appear to be missing RRIDs, and can even suggest RRIDs under certain circumstances. **All RRID suggestions should be verified;** only the author can know whether the suggestions are correct.
