SciScore Report

Below you will find your SciScore report containing three tables. Your score is calculated based on adherence to scientific rigor criteria (Table 1) and identification of key biological resources (Table 2). Table 3 contains statistical tests and oligonucleotides but is not scored. If SciScore makes any mistakes, please contact us to help us learn and improve.

Table 1: Rigor Adherence Table

Ethics
not required.
Inclusion and Exclusion Criteria
not required.
Attrition
not required.
Sex as a biological variable
not detected.
Subject Demographics
Age: A non-probability sampling method was used, in which all children under age five years who presented with diarrhoea at public health facilities in the Kavango regions between 2010 and 2017 were included in the study.
Randomization
not detected.
Blinding
not detected.
Power Analysis
not detected.
Replication
not required.

Your Sentences	Recognized Entity
Statistical Tests	
The effectiveness of the rotavirus vaccine was determined through the Analysis Of Covariance (ANCOVA) where interrupted time series analysis of diarrhoea cases among children under age five before and after introduction of the rotavirus vaccines were evaluated.	ANCOVA

SciScore is an automated tool that is designed to assist expert reviewers by finding and presenting formulaic information scattered throughout a paper in a standard, easy to digest format. ***SciScore is not a substitute for expert review.*** SciScore also checks for the presence and correctness of several unique identifiers, including RRIDs (research resource identifiers) in the manuscript, detects sentences that appear to be missing RRIDs, and can even suggest RRIDs under certain circumstances. **All RRID suggestions should be verified;** only the author can know whether the suggestions are correct.
