SciScore Report

Below you will find your SciScore report containing three tables. Your score is calculated based on adherence to scientific rigor criteria (Table 1) and identification of key biological resources (Table 2). Table 3 contains statistical tests and oligonucleotides but is not scored. If SciScore makes any mistakes, please contact us to help us learn and improve.

Table 1: Rigor Adherence Table

Ethics
IRB: The universitys research ethics committee approved the experiment presented here, which was carried out in accordance with the provisions of the World Medical Association Declaration of Helsinki.
Consent: Participants provided written informed consent before taking part and were given both a written and verbal debriefing upon completion.
Inclusion and Exclusion Criteria
Data from one additional participant were excluded due to a failure to complete all the tasks.
Attrition
not detected.
Sex as a biological variable
Method Participants A total of 90 undergraduate students (age range, 18-25 years 61 women 83 self-reported as White) participated in exchange for course credits.
Subject Demographics
Age: Method Participants A total of 90 undergraduate students (age range, 18-25 years 61 women 83 self-reported as White) participated in exchange for course credits.
Randomization
Importantly, after every response, the new display of faces was randomized with respect to spatial position onscreen, meaning that participants could not use location information to inform their decisions.
Blinding
not detected.
Power Analysis
not detected.
Replication
not required.

Table 2: Key Resources Table

Your Sentences	REAGENT or RESOURCE	SOURCE	IDENTIFIER
Software and Algorithms			
Images were already cropped below the hairline, and we additionally cropped them just below the chin, and close to the sides of the faces, using Adobe Photoshop CS software.	Adobe Photoshop		Suggestion: Adobe Photoshop, RRID:SCR_014199(link)
Following this, participants performed a face memory task adapted from previous work (Crook & Larrabee, 1992), presented on a desktop computer using custom MATLAB software.	MATLAB		Suggestion: MATLAB, RRID:SCR_001622(link)

SciScore is an automated tool that is designed to assist expert reviewers by finding and presenting formulaic information scattered throughout a paper in a standard, easy to digest format. ***SciScore is not a substitute for expert review.*** SciScore also checks for the presence and correctness of several unique identifiers, including RRIDs (research resource identifiers) in the manuscript, detects sentences that appear to be missing RRIDs, and can even suggest RRIDs under certain circumstances. **All RRID suggestions should be verified;** only the author can know whether the suggestions are correct.
