SciScore Report

Below you will find your SciScore report containing three tables. Your score is calculated based on adherence to scientific rigor criteria (Table 1) and identification of key biological resources (Table 2). Table 3 contains statistical tests and oligonucleotides but is not scored. If SciScore makes any mistakes, please contact us to help us learn and improve.

Table 1: Rigor Adherence Table

Ethics
IRB: Patients were first recruited to the NIH through Institutional Review Board–approved protocols specific to their institute.
Inclusion and Exclusion Criteria
Inclusion criteria for participation included postmenarchal females with GATA2 deficiency, DOCK8 deficiency, and SCD anticipating HSCT with baseline FSH ≤13 IU/L or AMH ≥0.50 ng/mL and the absence of any medical contraindications to ovarian stimulation or oocyte retrieval.
Attrition
not detected.
Sex as a biological variable
Materials and methods This was a retrospective case series of female patients with GATA2 deficiency, DOCK8 deficiency, and SCD undergoing fertility preservation prior to HSCT with the Department of Reproductive Endocrinology and Infertility at NIH between September 2014 and December 2019.
Subject Demographics
Age: Additionally, patients younger than 16 years of age received a bioethics consultation.
Randomization
not detected.
Blinding
not detected.
Power Analysis
not detected.
Replication
not required.

Table 2: Key Resources Table

Your Sentences	REAGENT or RESOURCE	SOURCE	IDENTIFIER
Software and Algorithms			
Descriptive statistics using Microsoft Excel were used to evaluate for trends.	Microsoft Excel		Suggestion: Microsoft Excel, RRID:SCR_016137(link)

SciScore is an automated tool that is designed to assist expert reviewers by finding and presenting formulaic information scattered throughout a paper in a standard, easy to digest format. ***SciScore is not a substitute for expert review.*** SciScore also checks for the presence and correctness of several unique identifiers, including RRIDs (research resource identifiers) in the manuscript, detects sentences that appear to be missing RRIDs, and can even suggest RRIDs under certain circumstances. **All RRID suggestions should be verified;** only the author can know whether the suggestions are correct.
