SciScore Report

Below you will find your SciScore report containing three tables. Your score is calculated based on adherence to scientific rigor criteria (Table 1) and identification of key biological resources (Table 2). Table 3 contains statistical tests and oligonucleotides but is not scored. If SciScore makes any mistakes, please contact us to help us learn and improve.

Table 1: Rigor Adherence Table

Ethics
Consent: All those contacted gave consent for the use of data from their hospital records , established during their hospital stay .
IRB: The study (ID RCB: 2019-A01968-49) was approved by an appropriate scientific ethics committee (Paris , IRB N . COS-RGDS-2019-10-002) .
Inclusion and Exclusion Criteria
We excluded acromioclavicular
Attrition
not detected.
Sex as a biological variable
not detected.
Subject Demographics
Age: Patients were considered eligible for the study if they were aged from 18 to 35 years, and had undergone one of 2 types of surgical intervention for shoulder instability: Bankart or Latarjet interventions.
Randomization
not detected.
Blinding
not detected.
Power Analysis
not detected.
Replication
not required.

Table 2: Key Resources Table

Your Sentences	REAGENT or RESOURCE	SOURCE	IDENTIFIER
Software and Algorithms			
All calculations were performed with SAS for Windows (v 9.4; SAS Institute Inc .	SAS Institute		Suggestion: Statistical Analysis System, RRID:SCR_008567(link)

Other Entities Detected

Your Sentences	Recognized Entity
Statistical Tests	
Depending on the nature of the endpoints considered, we used Cox models or analysis of covariance to identify risk or explanatory factors associated with the outcome of interest.	analysis of covariance
We compared patient characteristics between groups defined on the basis of type of surgery (Bankart or Latarjet), in chi-squared or Fisher's exact tests for qualitative data, and Student's t tests for quantitative data, after verification of Gaussian distribution.	chi-squared
	Fisher's exact tests
	t tests

SciScore is an automated tool that is designed to assist expert reviewers by finding and presenting formulaic information scattered throughout a paper in a standard, easy to digest format. ***SciScore is not a substitute for expert review.*** SciScore also checks for the presence and correctness of several unique identifiers, including RRIDs (research resource identifiers) in the manuscript, detects sentences that appear to be missing RRIDs, and can even suggest RRIDs under certain circumstances. **All RRID suggestions should be verified;** only the author can know whether the suggestions are correct.
