SciScore Report

Below you will find your SciScore report containing three tables. Your score is calculated based on adherence to scientific rigor criteria (Table 1) and identification of key biological resources (Table 2). Table 3 contains statistical tests and oligonucleotides but is not scored. If SciScore makes any mistakes, please contact us to help us learn and improve.

Table 1: Rigor Adherence Table

Ethics
Consent: The participants were then provided an ‘informed consent form’ and they all signed the informed consent form before performing the study.
IRB: 2.3 Ethical approval and informed consent The ethics committee of the Department of Psychology at Chittagong University, Bangladesh approved this study and gave me moral support to conduct it.
Inclusion and Exclusion Criteria
not detected.
Attrition
not detected.
Sex as a biological variable
The participants were equally divided in terms of sex (male = 60, female = 60) and numbers of universities (30 students from each university).
Subject Demographics
Age: In order to pursue the study, a total of 120 non-married university students were selected who were age ranged between 21-24 years (M = 22.45, SD = 1.75).
Randomization
not detected.
Blinding
not detected.
Power Analysis
not detected.
Replication
not required.

Table 2: Key Resources Table

Your Sentences	REAGENT or RESOURCE	SOURCE	IDENTIFIER

SciScore is an automated tool that is designed to assist expert reviewers by finding and presenting formulaic information scattered throughout a paper in a standard, easy to digest format. ***SciScore is not a substitute for expert review.*** SciScore also checks for the presence and correctness of several unique identifiers, including RRIDs (research resource identifiers) in the manuscript, detects sentences that appear to be missing RRIDs, and can even suggest RRIDs under certain circumstances. **All RRID suggestions should be verified;** only the author can know whether the suggestions are correct.
