SciScore Report

Below you will find your SciScore report containing three tables. Your score is calculated based on adherence to scientific rigor criteria (Table 1) and identification of key biological resources (Table 2). Table 3 contains statistical tests and oligonucleotides but is not scored. If SciScore makes any mistakes, please contact us to help us learn and improve.

Table 1: Rigor Adherence Table

Ethics
not required.
Inclusion and Exclusion Criteria
Articles were eligible following these criteria however , they may be excluded if appropriate information was not reported.
Attrition
Prospective Non-Controlled Clinical Trial. 4 Hung IF , Lung , et al 2020 20 168 6 weeks 86 patients in the intervention group and 41 patients in the control group .
Sex as a biological variable
For example, patients with certain underlying conditions were excluded, pregnant and lactating mothers were also excluded all excluded minors below 18 years old.
Subject Demographics
Age: Articles reporting COVID-19 confirmed patients (age 18 years or older) being treated with interferon were included in the analysis .
Randomization
All randomized controlled trials , case-report , and experimental studies were included.
Blinding
Investigators were not blinded during searching and selecting information , so complete authors names were visible for them , subtracting the studys value.
Power Analysis
not detected.
Replication
not required.

Table 2: Key Resources Table

Your Sentences	REAGENT or RESOURCE	SOURCE	IDENTIFIER
Software and Algorithms			
Materials and Methods A database search of PubMed, ScienceDirect, Cochrane, and Clinicaltrials.gov was performed, including articles from December 2019 to December 2020, to review IFN-bs efficacy and safety in patients confirmed with SARS-CoV-2.	PubMed		Suggestion: PubMed (RRID:SCR_004846)(link)
	Cochrane		Suggestion: Cochrane Library (RRID:SCR_013000)(link)
The MeSH terms COVID-19, Coronavirus, SARS-CoV-2, Interferon beta, beta interferon, Interferon-beta were used (Table 1).	MeSH		Suggestion: MeSH (RRID:SCR_004750)(link)
The Cochrane Reviews were used to pass the following judgments: high risk, low risk, and unclear due to lack of information or any type of uncertainty 19.	Cochrane Reviews		

SciScore is an automated tool that is designed to assist expert reviewers by finding and presenting formulaic information scattered throughout a paper in a standard, easy to digest format. ***SciScore is not a substitute for expert review.*** SciScore also checks for the presence and correctness of several unique identifiers, including RRIDs (research resource identifiers) in the manuscript, detects sentences that appear to be missing RRIDs, and can even suggest RRIDs under certain circumstances. **All RRID suggestions should be verified;** only the author can know whether the suggestions are correct.
