SciScore Report

Below you will find your SciScore report containing three tables. Your score is calculated based on adherence to scientific rigor criteria (Table 1) and identification of key biological resources (Table 2). Table 3 contains statistical tests and oligonucleotides but is not scored. If SciScore makes any mistakes, please contact us to help us learn and improve.

Table 1: Rigor Adherence Table

Ethics
Consent: As the majority of general surgery applicants apply and interview at most programs across Canada, this sample captures the majority of general surgery applicants in Canada. 4 Informed consent was detailed in the survey description.
IRB:) Ethics approval: Our institutional review board granted a waiver for this study as it falls within the context of quality improvement and program evaluation.
Inclusion and Exclusion Criteria
Surveys with incomplete data were analyzed on a case-by-case basis and were excluded if more than two items were incomplete.
Attrition
not detected.
Sex as a biological variable
not detected.
Subject Demographics
Age: not detected.
Weight: not detected.
Randomization
not detected.
Blinding
not detected.
Power Analysis
not detected.
Replication

not required.

Table 2: Key Resources Table

Your Sentences	REAGENT or RESOURCE	SOURCE	IDENTIFIER
Experimental Models: Organisms/Strains			
Regionalized interview modelling To simulate the potential CO2 emission reductions if interviews were regionalized, we constructed two models in which candidates flew to one (Toronto, ON) or two cities (Toronto and Calgary, AB) for their interviews, using city of origin data submitted in each applicants CaRMS application.	AB		Suggestion: RRID:ZFIN_ZDB-GENO-960809-7(link)
Software and Algorithms			
Cost, distance, and CO2 emissions calculation Respondents reported a cost range for each spending category (see Figure 2).	Cost		Suggestion: COST (RRID:SCR_014098)(link)
IBM SPSS Statistics for Windows, Version 26.0.	SPSS		Suggestion: SPSS, RRID:SCR_002865(link)

Other Entities Detected

Your Sentences	Recognized Entity
Statistical Tests	
Statistical analysis A one-way ANOVA was used to compare costs and CO2 emissions by region of origin.	ANOVA
An independent-samples t-test was used to compare CO2 emissions between the Current Model and the One-City Model, and the Current Model and the Two-City Model.	t-test

SciScore is an automated tool that is designed to assist expert reviewers by finding and presenting formulaic information scattered throughout a paper in a standard, easy to digest format. ***SciScore is not a substitute for expert review.*** SciScore also checks for the presence and correctness of several unique identifiers, including RRIDs (research resource identifiers) in the manuscript, detects sentences that appear to be missing RRIDs, and can even suggest RRIDs under certain circumstances. **All RRID suggestions should be verified;** only the author can know whether the suggestions are correct.
