SciScore Report

Below you will find your SciScore report containing three tables. Your score is calculated based on adherence to scientific rigor criteria (Table 1) and identification of key biological resources (Table 2). Table 3 contains statistical tests and oligonucleotides but is not scored. If SciScore makes any mistakes, please contact us to help us learn and improve.

Table 1: Rigor Adherence Table

Ethics
Consent: Participants willing to take part in the survey indicated their consent by ticking the yes button on the webpage.
IRB: Ethics Approval The study was approved by the Sydney Childrens Hospitals Network Human Research Ethics Committee (LNR18SCHN177).
Inclusion and Exclusion Criteria
Those who had not cared for any paediatric patients with asthma in the preceding 12 months or worked in outpatient clinics were excluded.
Attrition
not detected.
Sex as a biological variable
not detected.
Subject Demographics
Age: Participants eligible for the survey included both nursing (ie, registered nurses, clinical nurse educators, clinical nurse specialists, clinical nurse consultant, nurse unit managers, nurse practitioners and enrolled nurses) and medical staff (ie, consultants, staff specialists, career medical officer, medical registrar and medical residents) in EDs and paediatric units, who had cared for children under 18 years with asthma in the preceding 12 months.
Randomization
not detected.
Blinding
not detected.
Power Analysis
Sample Size Calculation Sample size calculation was calculated based on the assumption that there were 2500 of eligible medical and nursing staff in total across the 37 hospitals.

Replication	
not required.	
Data Information	
Identifiers: Comparisons between LHDs and departments (ED vs paediatric ward) were analyzed using F-test approximation of the Rao and Scott Chi-square test,22,23 which adjusted for the design effect.	test,22,23

Table 2: Key Resources Table

Your Sentences	Recognized Entity
Statistical Tests	
Comparisons between LHDs and departments (ED vs paediatric ward) were analyzed using F-test approximation of the Rao and Scott Chi-square test,22,23 which adjusted for the design effect.	F-test
	Scott Chi-square

SciScore is an automated tool that is designed to assist expert reviewers by finding and presenting formulaic information scattered throughout a paper in a standard, easy to digest format. ***SciScore is not a substitute for expert review.*** SciScore also checks for the presence and correctness of several unique identifiers, including RRIDs (research resource identifiers) in the manuscript, detects sentences that appear to be missing RRIDs, and can even suggest RRIDs under certain circumstances. **All RRID suggestions should be verified;** only the author can know whether the suggestions are correct.
