SciScore Report

Below you will find your SciScore report containing three tables. Your score is calculated based on adherence to scientific rigor criteria (Table 1) and identification of key biological resources (Table 2). Table 3 contains statistical tests and oligonucleotides but is not scored. If SciScore makes any mistakes, please contact us to help us learn and improve.

Table 1: Rigor Adherence Table

Ethics
Consent: The questions related to asking participants about the following: whether family is included in therapy sessions whether family was included if a client was under 18: whether neuroscience pain education should be included in therapy whether consent was sought formally for communication with other professionals and the distinction between psychological processes and concerns.
IRB: Ethics Approval This survey and all materials used were approved by the University of South Australia Human Research Ethics Committee on 01092019, ethics application number 202576.
Inclusion and Exclusion Criteria
Family inclusion and under 18 questions were excluded as they were deemed outside of the study scope.
Attrition
not detected.
Sex as a biological variable
This included a senior clinical psychologist working with chronic pain groups, a prominent professor of physiotherapy specializing in chronic pain research, and a specialist gynecologist and pain medicine physician who has been working with women who have PPP for over 20 years.
Subject Demographics
Age: This included a senior clinical psychologist working with chronic pain groups, a prominent professor of physiotherapy specializing in chronic pain research, and a specialist gynecologist and pain medicine physician who has been working with women who have PPP for over 20 years.
Randomization
not detected.
Blinding
not detected.
Power Analysis
not detected.

Replication
not required.

Table 2: Key Resources Table

Your Sentences	REAGENT or RESOURCE	SOURCE	IDENTIFIER
Software and Algorithms			
Results from the test-retest were then loaded into MedCalc Statistical Software32 and inter-rater agreement weighted Kappa conducted for each question.	MedCalc		Suggestion: MedCalc (RRID:SCR_015044)(link)

Other Entities Detected

Your Sentences	Recognized Entity
Statistical Tests	
Chi-square analyses were conducted to explore the results by some features of the respondents.	Chi-square

SciScore is an automated tool that is designed to assist expert reviewers by finding and presenting formulaic information scattered throughout a paper in a standard, easy to digest format. ***SciScore is not a substitute for expert review.*** SciScore also checks for the presence and correctness of several unique identifiers, including RRIDs (research resource identifiers) in the manuscript, detects sentences that appear to be missing RRIDs, and can even suggest RRIDs under certain circumstances. **All RRID suggestions should be verified;** only the author can know whether the suggestions are correct.
