Document Identifier: **PMC8277202**

SciScore Report

Below you will find your SciScore report containing three tables. Your score is calculated based on adherence to scientific rigor criteria (Table 1) and identification of key biological resources (Table 2). Table 3 contains statistical tests and oligonucleotides but is not scored. If SciScore makes any mistakes, please contact us to help us learn and improve.

Table 1: Rigor Adherence Table

Ethics
IRB: This study is the 6-month postpartum metabolic subsection of a larger prospective cohort study, the Postpartum Physiology, Psychology and Paediatric follow-up study (P4 study) (18) and was approved by the South-Eastern Sydney Local Health District Human Research Ethics Committee (HREC12POWH395).
Consent: Written informed consent was obtained from all participants .
Inclusion and Exclusion Criteria
English-speaking women who had given birth to a live singleton at St George Hospital within the preceding 6 months were eligible for inclusion.
Attrition
not detected.
Sex as a biological variable
English-speaking women who had given birth to a live singleton at St George Hospital within the preceding 6 months were eligible for inclusion.
Subject Demographics
Age: not detected.
Weight: not detected.
Randomization
not detected.
Blinding
not detected.
Power Analysis
As such, an a priori power calculation was not performed for this substudy.
Replication

not required.

Table 2: Key Resources Table

Your Sentences	REAGENT or RESOURCE	SOURCE	IDENTIFIER
Software and Algorithms			
Statistical Analysis and Sample Size Statistical analysis was performed using IBM SPSS software for Windows (version 25, 2017, IBM Corporation, Armonk, NY, USA).	SPSS		Suggestion: SPSS, RRID:SCR_002865(link)

Other Entities Detected

Your Sentences	Recognized Entity
Statistical Tests	
To identify any significant differences in energy intake and expenditure parameters between previously preeclamptic and normotensive cohorts, 2-tailed, independent samples t tests were conducted.	t tests
Fishers exact tests were performed to compare proportions between groups.	Fishers exact tests
Pearsons correlations were used to determine the relationship between measures of energy balance and body composition.	Pearsons correlations

SciScore is an automated tool that is designed to assist expert reviewers by finding and presenting formulaic information scattered throughout a paper in a standard, easy to digest format. ***SciScore is not a substitute for expert review.*** SciScore also checks for the presence and correctness of several unique identifiers, including RRIDs (research resource identifiers) in the manuscript, detects sentences that appear to be missing RRIDs, and can even suggest RRIDs under certain circumstances. **All RRID suggestions should be verified;** only the author can know whether the suggestions are correct.
