SciScore Report

Below you will find your SciScore report containing three tables. Your score is calculated based on adherence to scientific rigor criteria (Table 1) and identification of key biological resources (Table 2). Table 3 contains statistical tests and oligonucleotides but is not scored. If SciScore makes any mistakes, please contact us to help us learn and improve.

Table 1: Rigor Adherence Table

Ethics
IRB: The use of this de-identified data source was approved for exemption by the New England Independent Review Board (NEIRB).
Inclusion and Exclusion Criteria
The code for IPF (516.31) was not eligible, although patients with this code were not excluded if they had another eligible code.
Attrition
not detected.
Sex as a biological variable
For age- and sex-standardized rates, crude prevalence and incidence rates were calculated for age strata among males and females and weights assigned to each stratum based on the 2014 US Census estimates.
Subject Demographics
Age: not detected.
Weight: not detected.
Randomization
not detected.
Blinding
not detected.
Power Analysis
not detected.
Replication
not required.
Cell Line Authentication

Authentication: All analyses were conducted using the Aetion Evidence Platform(r) (2020), v3.19, software for real-world data analysis, which has been validated for a range of studies 27.

Table 2: Key Resources Table

Your Sentences	REAGENT or RESOURCE	SOURCE	IDENTIFIER

SciScore is an automated tool that is designed to assist expert reviewers by finding and presenting formulaic information scattered throughout a paper in a standard, easy to digest format. ***SciScore is not a substitute for expert review.*** SciScore also checks for the presence and correctness of several unique identifiers, including RRIDs (research resource identifiers) in the manuscript, detects sentences that appear to be missing RRIDs, and can even suggest RRIDs under certain circumstances. **All RRID suggestions should be verified;** only the author can know whether the suggestions are correct.
