SciScore Report

Below you will find your SciScore report containing three tables. Your score is calculated based on adherence to scientific rigor criteria (Table 1) and identification of key biological resources (Table 2). Table 3 contains statistical tests and oligonucleotides but is not scored. If SciScore makes any mistakes, please contact us to help us learn and improve.

Table 1: Rigor Adherence Table

Ethics
Consent: Material and Methods This was a prospective study with a view to assess the information given to patients before signing the consent form and to assess the efficiency in filling up the consent form.
IRB: Since there was no human sampling or intervention, ethics committee approval was not sought.
Inclusion and Exclusion Criteria
Exclusion criteria All patients who have been operated on in any other hospital.
Attrition
not detected.
Sex as a biological variable
not detected.
Subject Demographics
Age: not detected.
Weight: not detected.
Randomization
The sample size was calculated to be 200 using a statistical software by using a sample size of previously related studies and considering the degree of freedom as 5 and the study subjects were selected using simple random sampling.
Blinding
not detected.
Power Analysis
The sample size was calculated to be 200 using a statistical software by using a sample size of previously related studies and considering the degree of freedom as 5 and the study subjects were selected using simple random sampling.
Replication

not required.
Cell Line Authentication
Authentication: After studying the available literature regarding informed consent in relevant journals, a validated checklist was adopted from WHOs website.

Table 2: Key Resources Table

Your Sentences	REAGENT or RESOURCE	SOURCE	IDENTIFIER

SciScore is an automated tool that is designed to assist expert reviewers by finding and presenting formulaic information scattered throughout a paper in a standard, easy to digest format. ***SciScore is not a substitute for expert review.*** SciScore also checks for the presence and correctness of several unique identifiers, including RRIDs (research resource identifiers) in the manuscript, detects sentences that appear to be missing RRIDs, and can even suggest RRIDs under certain circumstances. **All RRID suggestions should be verified;** only the author can know whether the suggestions are correct.
