SciScore Report

Below you will find your SciScore report containing three tables. Your score is calculated based on adherence to scientific rigor criteria (Table 1) and identification of key biological resources (Table 2). Table 3 contains statistical tests and oligonucleotides but is not scored. If SciScore makes any mistakes, please contact us to help us learn and improve.

Table 1: Rigor Adherence Table

Ethics
IACUC: 2 MATERIALS AND METHODS 2.1 Animals and study design Ten healthy purpose-bred research dogs housed in accordance with regulations of the Institutional Animal Care and Use Committee (IACUC) were studied.
Inclusion and Exclusion Criteria
not detected.
Attrition
not detected.
Sex as a biological variable
not detected.
Subject Demographics
Age: not detected.
Weight: not detected.
Randomization
not detected.
Blinding
not detected.
Power Analysis
Based on a sample size calculation derived from pilot experiments , 8 dogs received IV 0.02 mgmg vincristine (Hospira , Lake Forest , Illinois)
Replication
not required.

Table 2: Key Resources Table

Your Sentences	REAGENT or RESOURCE	SOURCE	IDENTIFIER
Antibodies			
2.3 Flow cytometry Platelet activation state was determined by binding of a monoclonal antibody against P-selectin , mouse anti-human CD62P-PE (clone AC1.2 , BD Biosciences , San Jose , California) to detect membrane-expressed P-selectin reflecting alpha granule release.	P-selectin		
	anti-human CD62P-PE		
	P-selectin reflecting alpha granule release.		
An irrelevant isotype-matched antibody mouse IgG1-PE (clone MOPC-2 , BD Pharmingen , San Jose , California) was used to demonstrate positive and specific staining for CD62P .	IgG1-PE		
	CD62P		
A monoclonal antibody against glycoprotein IIIa , mouse anti-human CD61-Alexa Fluor 647 (clone F11 , Bio-Rad , Hercules , California) , was used as a platelet identifier .	antibody against glycoprotein IIIa , mouse anti-human CD61-Alexa Fluor 647		
	anti-human		
The commercially available antibody clones for CD61 and CD62P have been used in previous flow cytometry studies to identify canine platelet antigens .	CD61		
Antibody incubations included CD61-A647 (0.45 mgmL) and CD62P-PE (0.55 mgmL) .	CD62P-PE		
Software and Algorithms			
Flow cytometric data including 20 000 putative single platelets per sample were acquired on an LSRII flow cytometer using FACSDiva v.	FACSDiva		Suggestion: BD FACSDiva Software, RRID:SCR_001456(link)
Data were analyzed using commercial software (FlowJo software v.10.3 , BD Biosciences , San Jose , California) .	FlowJo		Suggestion: FlowJo, RRID:SCR_008520(link)
2.5 Statistical analysis Statistical analysis was performed using a commercially available software (SigmaStat, version 3.5).	SigmaStat		

Other Entities Detected

Your Sentences	Recognized Entity
Statistical Tests	
The statistical difference between treatment and time for parameters such as TO+ platelet number and percent antibody binding for both TO+ and TO- platelets was assessed using a 2-way ANOVA.	ANOVA
The average difference between the activation in the TO+ group vs the TO- platelets was compared using t tests or Wilcoxon signed rank test, as appropriate for the data distribution.	t tests
	Wilcoxon signed rank test
05 was considered significant, and corrections for multiple comparisons using a Bonferroni correction were employed where relevant.	Bonferroni

SciScore is an automated tool that is designed to assist expert reviewers by finding and presenting formulaic information scattered throughout a paper in a standard, easy to digest format. ***SciScore is not a substitute for expert review.*** SciScore also checks for the presence and correctness of several unique identifiers, including RRIDs (research resource identifiers) in the manuscript, detects sentences that appear to be missing RRIDs, and can even suggest RRIDs under certain circumstances. **All RRID suggestions should be verified;** only the author can know whether the suggestions are correct.
