SciScore Report

Below you will find your SciScore report containing three tables. Your score is calculated based on adherence to scientific rigor criteria (Table 1) and identification of key biological resources (Table 2). Table 3 contains statistical tests and oligonucleotides but is not scored. If SciScore makes any mistakes, please contact us to help us learn and improve.

Table 1: Rigor Adherence Table

Ethics
Consent: Then, all participants completed written informed consent, which acknowledged that they understood and agreed to the terms of this study, including its voluntary and confidential nature.
IRB: This study was conducted in accordance with the Declaration of Helsinki and received ethical approval from the ethics review board of Shandong Womens University.
Inclusion and Exclusion Criteria
not detected.
Attrition
not detected.
Sex as a biological variable
Measures Family Communication Quality The Parent-Adolescent Communication Scale was used to measure youths perceptions of communication quality with their mothers and fathers, respectively.
Subject Demographics
Age: By using cluster sampling, 550 adolescents were recruited from 2 colleges in the urban areas of Jinan, the capital city of Shandong Province in China (65.01 girls age range: 16.10-24.09 years Mage = 18.97 +- 0.89 years).
Randomization
not detected.
Blinding
not detected.
Power Analysis
The open-source statistical language R was used to determine the minimum size of the research sample with power = 0.80 options.
Replication

not required.

Table 2: Key Resources Table

Your Sentences	REAGENT or RESOURCE	SOURCE	IDENTIFIER
Software and Algorithms			
Analysis Plan In the present study, SPSS 22.0 was used to conduct descriptive statistics among the variables.	SPSS		Suggestion: SPSS, RRID:SCR_002865(link)

Other Entities Detected

Your Sentences	Recognized Entity
Statistical Tests	
Overall model fit was acceptable when root mean square error of approximation (RMSEA) < 0.08, comparative fit index (CFI) > 0.90, and Tucker-Lewis index (TLI) > 0.90.50 The significance of direct and indirect effects was tested using 95 bias-corrected bootstrap.	Tucker-Lewis index

SciScore is an automated tool that is designed to assist expert reviewers by finding and presenting formulaic information scattered throughout a paper in a standard, easy to digest format. ***SciScore is not a substitute for expert review.*** SciScore also checks for the presence and correctness of several unique identifiers, including RRIDs (research resource identifiers) in the manuscript, detects sentences that appear to be missing RRIDs, and can even suggest RRIDs under certain circumstances. **All RRID suggestions should be verified;** only the author can know whether the suggestions are correct.
