SciScore Report

Below you will find your SciScore report containing three tables. Your score is calculated based on adherence to scientific rigor criteria (Table 1) and identification of key biological resources (Table 2). Table 3 contains statistical tests and oligonucleotides but is not scored. If SciScore makes any mistakes, please contact us to help us learn and improve.

Table 1: Rigor Adherence Table

Ethics
IRB: The study was approved by the Ethics Committee of Lao PDR MoH and of Cambodia MoH, and by the committee for the protection of persons in Nouvelle Aquitaine region (France) (Appendix 2).
Consent: All included subjects provided their written informed consent.
Inclusion and Exclusion Criteria
not detected.
Attrition
not detected.
Sex as a biological variable
not detected.
Subject Demographics
Age: Children under 2 years of age were not included.
Randomization
not detected.
Blinding
not detected.
Power Analysis
not detected.
Replication
not required.

Table 2: Key Resources Table

Your Sentences	REAGENT or RESOURCE	SOURCE	IDENTIFIER

Other Entities Detected

Your Sentences	Recognized Entity
Statistical Tests	
The primary and secondary endpoints were compared between intervention and control areas using chi-square tests.	chi-square tests
Sociodemographic variables were compared using the chi-square test or Fisher exact test and t-test.	chi-square test
	Fisher exact test
	t-test

SciScore is an automated tool that is designed to assist expert reviewers by finding and presenting formulaic information scattered throughout a paper in a standard, easy to digest format. ***SciScore is not a substitute for expert review.*** SciScore also checks for the presence and correctness of several unique identifiers, including RRIDs (research resource identifiers) in the manuscript, detects sentences that appear to be missing RRIDs, and can even suggest RRIDs under certain circumstances. **All RRID suggestions should be verified;** only the author can know whether the suggestions are correct.
