SciScore Report

Below you will find your SciScore report containing three tables. Your score is calculated based on adherence to scientific rigor criteria (Table 1) and identification of key biological resources (Table 2). Table 3 contains statistical tests and oligonucleotides but is not scored. If SciScore makes any mistakes, please contact us to help us learn and improve.

Table 1: Rigor Adherence Table

Ethics
IRB: Methods The institutional ethics committee of Clinical Hospital of Sao Paulo University approved this study, clinical trial number U1111-1144-8754.
Consent: All participants provided written informed consent before undertaking any investigational procedures.
Inclusion and Exclusion Criteria
Patients with other neurologic conditions including migraine, as well as other otologic, psychiatric, cardiac, or unstable systemic diseases, motor limitations, uncorrected visual impairments, implanted metallic objects, history of claustrophobia, and those taking psychotropic drugs for any reason were excluded.
Attrition
31 Patients who had persistent dizziness despite initial treatment and met the Barany Societys definition for PPPD, 2 which was available in draft form at the start of this investigation, constituted the pool of potential subjects with PPPD.
Sex as a biological variable
Female, right-handed subjects, 18 to 60 years old, were recruited from Neurotology Division of ENT Department of Clinical Hospital of Sao Paulo University if they were diagnosed with PPPD or had recovered fully from a disorder that manifested with acute vestibular symptoms or disturbance of balance.
Subject Demographics
Age: Female, right-handed subjects, 18 to 60 years old, were recruited from Neurotology Division of ENT Department of Clinical Hospital of Sao Paulo University if they were diagnosed with PPPD or had recovered fully from a disorder that manifested with acute vestibular symptoms or disturbance of balance.
Randomization
not detected.
Blinding
not detected.
Power Analysis

not detected.
Replication
not required.

Table 2: Key Resources Table

Your Sentences	REAGENT or RESOURCE	SOURCE	IDENTIFIER
Software and Algorithms			
Data Analysis We analyzed fMRI data using the functional MRI of the brain (FMRIB) Software Library version 5.0.1, tool FEAT 6.0.	FMRIB		Suggestion: FSL, RRID:SCR_002823(link)

Other Entities Detected

Your Sentences	Recognized Entity
Statistical Tests	
We used the Student t -test to compare the average BOLD signal within each group for each block type and for block differences.	t -test

SciScore is an automated tool that is designed to assist expert reviewers by finding and presenting formulaic information scattered throughout a paper in a standard, easy to digest format. ***SciScore is not a substitute for expert review.*** SciScore also checks for the presence and correctness of several unique identifiers, including RRIDs (research resource identifiers) in the manuscript, detects sentences that appear to be missing RRIDs, and can even suggest RRIDs under certain circumstances. **All RRID suggestions should be verified;** only the author can know whether the suggestions are correct.
