SciScore Report

Below you will find your SciScore report containing three tables. Your score is calculated based on adherence to scientific rigor criteria (Table 1) and identification of key biological resources (Table 2). Table 3 contains statistical tests and oligonucleotides but is not scored. If SciScore makes any mistakes, please contact us to help us learn and improve.

Table 1: Rigor Adherence Table

Ethics
IRB: Methods Ethical Approval The ethics approvals for this study were obtained from the Medical Research Ethics Committee, Beijing Chest Hospital, Capital Medical University (BJXK-20150901) and ethics approvals were also obtained for all study sites (Table 1 in the supplementary material).
Consent: Written informed consent was acquired from each participant.
Inclusion and Exclusion Criteria
The inclusion criteria for this study were as follows: (1) new spinal TB case, defined as patient with spinal TB and had never been treated with anti-TB drug, (2) 15 years or older, (3) with definite surgical indications, (4) patient understood the nature of the study and gave informed consent.
Attrition
not detected.
Sex as a biological variable
not detected.
Subject Demographics
Age: not detected.
Weight: not detected.
Randomization
Study Design and Participants This multicenter, prospective, randomized trial was conducted in four hospitals in China (Beijing Chest Hospital, the 8th Medical Center of Chinese PLA General Hospital, Beijing Geriatric Hospital, and PLA Army General Hospital) between June 2014 and December 2016.
Blinding
All participants and clinicians involved in this study were unblinded to the treatment allocation, while the radiologists were blinded.
Power Analysis
not detected.

Replication
not required.

Table 2: Key Resources Table

Your Sentences	REAGENT or RESOURCE	SOURCE	IDENTIFIER
Software and Algorithms			
Statistical Analysis SPSS version 19.0 (IBM, Armonk, NY, USA) was used to compare baseline clinical characteristics and the demographic data via Mann-Whitney U test for continuous variables and chi-squared test for categorical variables.	SPSS		Suggestion: SPSS, RRID:SCR_002865(link)

Other Entities Detected

Your Sentences	Recognized Entity
Statistical Tests	
Statistical Analysis SPSS version 19.0 (IBM, Armonk, NY, USA) was used to compare baseline clinical characteristics and the demographic data via Mann-Whitney U test for continuous variables and chi-squared test for categorical variables.	Mann-Whitney U test
	chi-squared test

SciScore is an automated tool that is designed to assist expert reviewers by finding and presenting formulaic information scattered throughout a paper in a standard, easy to digest format. ***SciScore is not a substitute for expert review.*** SciScore also checks for the presence and correctness of several unique identifiers, including RRIDs (research resource identifiers) in the manuscript, detects sentences that appear to be missing RRIDs, and can even suggest RRIDs under certain circumstances. **All RRID suggestions should be verified;** only the author can know whether the suggestions are correct.

For a full description of scored criteria and tips for improving your score, please see https://www.scicrunch.com/sciscorereport-faq
