Document Identifier: **PMC8336552**

SciScore Report

Below you will find your SciScore report containing three tables. Your score is calculated based on adherence to scientific rigor criteria (Table 1) and identification of key biological resources (Table 2). Table 3 contains statistical tests and oligonucleotides but is not scored. If SciScore makes any mistakes, please contact us to help us learn and improve.

Table 1: Rigor Adherence Table

Ethics
Consent: Methods Participants Twenty-five participants were recruited and gave their written informed consent to participate in the study, after approaching orienteering high schools and sport clubs in the metropolitan area of Stockholm, Sweden.
IRB: The study procedure was approved by the Regional Ethical Review Board in Stockholm according to the principles of the Declaration of Helsinki.
Inclusion and Exclusion Criteria
not detected.
Attrition
Two data points were lost concerning the post-test VO2max data due to technical problems or not meeting the VO2max criterion of reaching a plateau.
Sex as a biological variable
Table 1 Participants characteristics Participants characteristics HTG STG ALL n 7 12 19 Women 5 6 11 Men 2 6 8 Age (years) 21.6 ± 6 20.7 ± 5.9 21 ± 5.8 Body mass (kg) 57.0 ± 6.1 63.5 ± 7.2 61.1 ± 7.3 RE (kcal/kg/km) 1.08 ± 0.07 1.12 ± 0.11 1.11 ± 0.10 VO2max (ml kg-1 min-1) 59.9 ± 6.2 61.9 ± 8.7 61.1 ± 7.8 Measurements Participants performed the following tests in the same order as described below.
Subject Demographics
Age: All participants were active competitive orienteers with ≥ 3 training sessions per week, > 16 years of age and no current injuries or surgery during the past year.
Randomization
not detected.
Blinding
not detected.
Power Analysis
not detected.

Replication
not required.

Table 2: Key Resources Table

Your Sentences	REAGENT or RESOURCE	SOURCE	IDENTIFIER
Software and Algorithms			
Data were exported from MetaSoft® Studio, Garmin Connect and JLab for statistical analysis in Prism 7 (GraphPad Software, Inc) and SPSS (IBM Corp.	Prism		Suggestion: Meta-Prism (RRID:SCR_021836)(link)
	GraphPad		Suggestion: GraphPad Prism, RRID:SCR_002798(link)
	SPSS		Suggestion: SPSS, RRID:SCR_002865(link)

Other Entities Detected

Your Sentences	Recognized Entity
Statistical Tests	
Field tests.	Field tests
Normal distribution was checked with a D'Agostino & Pearson normality test.	Pearson normality test
A factorial ANOVA was used for physiological and biomechanical data for time (pre and post), treadmill speed and type of training.	ANOVA
If a global effect for ANOVA was observed a Bonferroni post hoc test was further used.	Bonferroni post hoc test
Pearson's correlations were calculated to establish the relationship between physiological and biomechanical variables.	Pearson's correlations
Oligonucleotides	
Laboratory tests Following the field tests, GCT and vertical ground reaction force development were assessed during one-leg drop jumps performed on hard and soft-landing surfaces to simulate the softer surface associated with trail running.	GCT

SciScore is an automated tool that is designed to assist expert reviewers by finding and presenting formulaic information scattered throughout a paper in a standard, easy to digest format. ***SciScore is not a substitute for expert review.*** SciScore also checks for the presence and correctness of several unique identifiers, including RRIDs (research resource identifiers) in the manuscript, detects sentences that appear to be missing RRIDs, and can even suggest RRIDs under certain circumstances. **All RRID suggestions should be verified;** only the author can know whether the suggestions are correct.
