Materials Design Analysis Reporting (MDAR) Checklist for Authors

The MDAR framework establishes a minimum set of requirements in transparent reporting applicable to studies in the life sciences (see Statement of Task: doi:10.31222/osf.oio/9sm4x.). The MDAR checklist is a tool for authors, editors and others seeking to adopt the MDAR framework for transparent reporting in manuscripts and other outputs. Please refer to the MDAR Elaboration Document for additional context for the MDAR framework.

Materials

Antibodies	Yes (indicate where provided: page no/section/legend)	n/a
For commercial reagents, provide supplier name, catalogue number and RRID, if available	No antibodes detected. Please add identifiers for all resources where possible	

Cell Materials	Yes (indicate where provided: page no/section/legend)	n/a
Cell lines: Provide species information, strain. Provide accession number in repository OR supplier name, catalog number, clone number, OR RRID	No cell lines detected Please add identifiers for all resources where possible	
Primary cultures: Provide species, strain, sex of origin, genetic modification status.	Not currently checked by SciScore	

Experimental Animals	Yes (indicate where provided: page no/section/legend)	n/a
Laboratory animals: Provide species, strain, sex, age, genetic modification status. Provide accession number in repository OR supplier name, catalog number, clone number, OR RRID	No organisms detected Please add identifiers for all resources where possible	
Animal observed in or captured from the field: Provide species, sex and age where possible	Not currently checked by SciScore	
Model organisms: Provide Accession number in repository (where relevant) OR RRID	See laboratory animals section for information.	

Plants and microbes	Yes (indicate where provided: page no/section/legend)	n/a
Plants: provide species and strain, unique accession number if available, and source (including location for collected wild specimens)	Not currently checked by SciScore	
Microbes: provide species and strain, unique accession number if available, and source	Not currently checked by SciScore	

Human research participants	Yes (indicate where provided: page no/section/legend)	n/a
Identify authority granting ethics approval (IRB or equivalent committee(s), provide reference number for approval.	The study protocol was approved by the Ethics Committee of Mersin University.	
Provide statement confirming informed consent obtained from study participants.	Inclusion criteria for the patient group were as follows: having diagnosed with CP by the pediatric neurologist based on medical history, clinical, and imaging findings; age <18 years; and having consent from his/her parents or legal guardians to participate in the study.	
Report on age and sex for all study participants.	**Age:**Age and sex were matched with the propensity score method and 176 children (101 males, 75 females; mean age 71.8±37.9 months; range, 24 to 184 months) for the patient group and 178 children (90 males, 88 females; mean age 69.3±55.2 months; range, 24 to 214 months) for the control group were included in the study. **Sex:**Age and sex were matched with the propensity score method and 176 children (101 males, 75 females; mean age 71.8±37.9 months; range, 24 to 184 months) for the patient group and 178 children (90 males, 88 females; mean age	

Human research participants	Yes (indicate where provided: page no/section/legend)	n/a
	69.3±55.2 months; range, 24 to 214 months) for the control group were included in the study.	

Design

Study protocol	Yes (indicate where provided: page no/section/legend)	n/a
For clinical trials, provide the trial registration number OR cite DOI in manuscript.	Not detected.	

Laboratory protocol	Yes (indicate where provided: page no/section/legend)	n/a
Provide DOI or other citation details if detailed step-by-step protocols are available.	Not detected.	

Experimental study design (statistics details)	Yes (indicate where provided: page no/section/legend)	n/a
State whether and how the following have been done, or if they were not carried out		
Sample size determination	Statistical analysis In the reference study, the incidence of COL4A1 (rs1961495) T allele in the control group was given as 44.8% with an odds ratio of 1.387.[3] Accordingly, it was planned to enroll 173 individuals in the patient group, 173 individuals in the control group, and a total of a minimum of 346 individuals with 80% study power and 5% type I error.	
Randomization	not detected.	
Blinding	not detected.	
inclusion/exclusion criteria	The control group was composed of 200 individuals who were referred to the Children#s Health Department of the institution and fulfilled inclusion criteria.	

Sample definition and in-laboratory replication	Yes (indicate where provided: page no/section/legend)	n/a
State number of times the experiment was replicated in laboratory	Not detected.	
Define whether data describe technical or biological replicates	Not detected.	

Ethics	Yes (indicate where provided: page no/section/legend)	n/a
Studies involving human participants: State details of authority granting ethics approval (IRB or equivalent committee(s), provide reference number for approval.	The study protocol was approved by the Ethics Committee of Mersin University.	
Studies involving experimental animals: State details of authority granting ethics approval (IRB or equivalent committee(s), provide reference number for approval.	Not detected.	
Studies involving specimen and field samples: State if relevant permits obtained, provide details of authority approving study; if none were required, explain why.	Not detected.	

Dual Use Research of Concern (DURC)	Yes (indicate where provided: page no/section/legend)	n/a
If study is subject to dual use research of concern, state the authority granting approval and reference number for the regulatory approval	Not currently checked by SciScore	

Analysis

Attrition	Yes (indicate where provided: page no/section/legend)	n/a
State if sample or data point from the analysis is excluded, and whether the criteria for exclusion were determined and specified in advance.	not detected.	

Statistics	Yes (indicate where provided: page no/section/legend)	n/a
Describe statistical tests used and justify choice of tests.	The Shapiro-Wilk test was used to check the normality of continuous variables.	

Data availability	Yes (indicate where provided: page no/section/legend)	n/a
State whether newly created datasets are available, including protocols for access or restriction on access.	Not detected.	
If data are publicly available, provide accession number in repository or DOI or URL.	Genotypic analysis of COL4A1 (rs1961495) and COL4A2 (rs9521733) polymorphisms The genotyping of analysis of the COL4A1 (rs1961495) and COL4A2 (rs9521733) polymorphisms were performed using a full-blood commercial kit , High Pure PCR Template Preparation Kit (Roche Applied Science , Penzberg , Germany) . The polymorphisms of the COL4A1 gene (rs196149) and COL4A2 gene (rs9521733) were performed using a pre-designed LightSNIP assay (TIB Molbiol , Berlin , Germany)	
If publicly available data are reused, provide accession number in repository or DOI or URL, where possible.	Not detected.	

Code availability	Yes (indicate where provided: page no/section/legend)	n/a
For all newly generated code and software essential for replicating the main findings of the study:		
State whether the code or software is available.	Not detected.	
If code is publicly available, provide accession number in repository, or DOI or URL.	Not detected.	

Analysis

Adherence to community standards	Yes (indicate where provided: page no/section/legend)	n/a
MDAR framework recommends adoption of discipline-specific guidelines, established and endorsed through community initiatives. Journals have their own policy about requiring specific guidelines and recommendations to complement MDAR.		
State if relevant guidelines (eg., ICMJE, MIBBI, ARRIVE) have been followed, and whether a checklist (eg., CONSORT, PRISMA, ARRIVE) is provided with the manuscript.	Not currently checked by SciScore
