Document Identifier: **PMC8365746**

SciScore Report

Below you will find your SciScore report containing three tables. Your score is calculated based on adherence to scientific rigor criteria (Table 1) and identification of key biological resources (Table 2). Table 3 contains statistical tests and oligonucleotides but is not scored. If SciScore makes any mistakes, please contact us to help us learn and improve.

Table 1: Rigor Adherence Table

Ethics
Field Sample Permit: As such, the number of peer-reviewed, indexed articles on a given topic is a good bibliometric indicator of overall research capacity for a given field.
IRB: This study was deemed exempt by the Institutional Review Board of Washington University in St. Louis. 2.2.2 Analysis We derived a series of indicators for each domain of research capacity included in the survey and calculated descriptive statistics (counts and percentages).
Inclusion and Exclusion Criteria
US-based articles were deemed ineligible if Latino populations were not central to the study.
Attrition
not detected.
Sex as a biological variable
23 Human capital includes the extent to which skills and knowledge are accessed fully across the labor force, including both women and men.
Subject Demographics
Age: In this phase, we also identified articles not including children and adolescents (under 18 years of age) or for which results for these groups were not reported separately from those of other age groups.
Randomization
not detected.
Blinding
not detected.
Power Analysis
not detected.
Replication
11 After running the initial search, duplicates and non-eligible documents were removed.

Number: 11 After running the initial search, duplicates and non-eligible documents were removed.

Table 2: Key Resources Table

Your Sentences	REAGENT or RESOURCE	SOURCE	IDENTIFIER
Software and Algorithms			
19 The search was conducted in April of 2020 using the PubMed and LILACS bibliographic databases.	PubMed		Suggestion: PubMed (RRID:SCR_004846)(link)
Using the Cartogram Geoprocessing Tool 21 in ArcMap v10.6 (ESRI, ArcGIS Desktop, Redlands, CA, USA), we built a series of density equalizing cartograms to contrast population size by country with overall and topic-specific research productivity across Latin America.	ArcMap		
Heat maps were developed using Python v3.7, via the Matplotlib and Seaborn 0.10 packages.	Python		
	Matplotlib		Suggestion: Matplotlib (RRID:SCR_008624)(link)

SciScore is an automated tool that is designed to assist expert reviewers by finding and presenting formulaic information scattered throughout a paper in a standard, easy to digest format. ***SciScore is not a substitute for expert review.*** SciScore also checks for the presence and correctness of several unique identifiers, including RRIDs (research resource identifiers) in the manuscript, detects sentences that appear to be missing RRIDs, and can even suggest RRIDs under certain circumstances. **All RRID suggestions should be verified;** only the author can know whether the suggestions are correct.
