SciScore Report

Below you will find your SciScore report containing three tables. Your score is calculated based on adherence to scientific rigor criteria (Table 1) and identification of key biological resources (Table 2). Table 3 contains statistical tests and oligonucleotides but is not scored. If SciScore makes any mistakes, please contact us to help us learn and improve.

Table 1: Rigor Adherence Table

Ethics
IRB: Ethical consideration Ethical clearance was obtained from the Institutional Review Board of the University of Cape Coast with identification number UCCIRBCHAS201708.
Consent: All participants provided written informed consent prior to enrolment in the study.
Inclusion and Exclusion Criteria
Mothers who had babies 6 months of age and above were excluded from the study.
Attrition
Twenty-five mothers out of the 388 did not receive any new born care education during the antenatal period.
Sex as a biological variable
Unemployed women accounted for 88 (26.1) of those interviewed as shown in Table 1 .
Subject Demographics
Age: not detected.
Weight: not detected.
Randomization
The Central region was randomly selected from the 10 administrative regions of Ghana.
Blinding
not detected.
Power Analysis
not detected.
Replication
not required.
Data Information

Identifiers: The questionnaire was developed after literature review 2,4,9,10,14,15 and validated by conducting a pilot study on 5 of the sample before the actual data collection period.	2,4,9,10,14,15

Table 2: Key Resources Table

Your Sentences	REAGENT or RESOURCE	SOURCE	IDENTIFIER
Software and Algorithms			
Statistical analysis was done using the SPSS version 22.0. 17 Whereas, frequency, percentage, mean and standard deviation were used for descriptive analysis, categorical analysis was done using Chi square tests to describe the association between variables with P < .	SPSS		Suggestion: SPSS, RRID:SCR_002865(link)

Other Entities Detected

Your Sentences	Recognized Entity
Statistical Tests	
Statistical analysis was done using the SPSS version 22.0. 17 Whereas, frequency, percentage, mean and standard deviation were used for descriptive analysis, categorical analysis was done using Chi square tests to describe the association between variables with P < .	Chi square tests

SciScore is an automated tool that is designed to assist expert reviewers by finding and presenting formulaic information scattered throughout a paper in a standard, easy to digest format. ***SciScore is not a substitute for expert review.*** SciScore also checks for the presence and correctness of several unique identifiers, including RRIDs (research resource identifiers) in the manuscript, detects sentences that appear to be missing RRIDs, and can even suggest RRIDs under certain circumstances. **All RRID suggestions should be verified;** only the author can know whether the suggestions are correct.
