SciScore Report

Below you will find your SciScore report containing three tables. Your score is calculated based on adherence to scientific rigor criteria (Table 1) and identification of key biological resources (Table 2). Table 3 contains statistical tests and oligonucleotides but is not scored. If SciScore makes any mistakes, please contact us to help us learn and improve.

Table 1: Rigor Adherence Table

Ethics
IRB: This study (University Medical Centre Groningen UMCG RR number 201899276) was assessed by the Medical Ethics Review Board of the UMCG, which concluded that a formal review process was not needed under Dutch law (WMOMETc2018213).
Consent: All participants provided written informed consent.
Inclusion and Exclusion Criteria
2.2 Participants and methods Patients were eligible to participate in our study when they used a DOAC for the indication AF and were included in the DOAC registry at Certe Thrombosis Service.
Attrition
not detected.
Sex as a biological variable
not detected.
Subject Demographics
Age: not detected.
Weight: not detected.
Randomization
The data were assumed to be missing at random, based on the intermittent pattern of the missing values.
Blinding
not detected.
Power Analysis
not detected.
Replication
not required.

Cell Line Authentication
Authentication: This was assessed using the validated Perception of Anticoagulant Treatment Questionnaire (PACT- Q) 9 (Supporting Information).
Data Information
Availability: 2 METHODS The data that support the findings of this study are available upon reasonable request.

Table 2: Key Resources Table

Your Sentences	REAGENT or RESOURCE	SOURCE	IDENTIFIER
Software and Algorithms			
A higher score represents a higher SES. 2.4 Statistical analysis Statistical analyses were performed with SPSS Statistics version 24 (IBM, Armonk, NY, USA).	SPSS		Suggestion: SPSS, RRID:SCR_002865(link)

Other Entities Detected

Your Sentences	Recognized Entity
Statistical Tests	
The Students independent samples t test or Mann Whitney U test was used to compare continuous variables, as appropriate.	t test
	Mann Whitney U test
Categorical data were compared using the chi-square test.	chi-square test

SciScore is an automated tool that is designed to assist expert reviewers by finding and presenting formulaic information scattered throughout a paper in a standard, easy to digest format. ***SciScore is not a substitute for expert review.*** SciScore also checks for the presence and correctness of several unique identifiers, including RRIDs (research resource identifiers) in the manuscript, detects sentences that appear to be missing RRIDs, and can even suggest RRIDs under certain circumstances. **All RRID suggestions should be verified;** only the author can know whether the suggestions are correct.

For a full description of scored criteria and tips for improving your score, please see https://www.scicrunch.com/sciscorereport-faq
