Document Identifier: **PMC8374393**

SciScore Report

Below you will find your SciScore report containing three tables. Your score is calculated based on adherence to scientific rigor criteria (Table 1) and identification of key biological resources (Table 2). Table 3 contains statistical tests and oligonucleotides but is not scored. If SciScore makes any mistakes, please contact us to help us learn and improve.

Table 1: Rigor Adherence Table

Ethics
IACUC: Methods Statement of research ethics All animal experiments were performed under the auspices of the Vanderbilt Institutional Animal Care and Use Committee and adhered to the Association for Research in Vision and Ophthalmology (ARVO) Statement on Animal Use and the EU Directive 2010/63/EU for animal experiments.
Inclusion and Exclusion Criteria
not detected.
Attrition
not detected.
Sex as a biological variable
not detected.
Subject Demographics
Age: not detected.
Weight: not detected.
Randomization
The treatment group is a factor variable, the week is a numeric variable (it would be 0 and 1 if the week is only for pre-treatment and post-treatment), and error term ε is a random (independent) variable representing the deviation of a value of ERG from the predicted value.
Blinding
not detected.
Power Analysis
not detected.
Replication

Five replicates were plated for each concentration of drug.
Number: Five replicates were plated for each concentration of drug.
Cell Line Authentication
not detected.

Table 2: Key Resources Table

Your Sentences	REAGENT or RESOURCE	SOURCE	IDENTIFIER
Experimental Models: Cell Lines			
We generally favor performing a pre-injection aqueous tap to reduce the intraocular pressure and prevent efflux of cells (or drug). • 1 million WERI-Rb-1 cells were resuspended in 100 µL 1X PBS and injected into the vitreous of either one or both eyes of the rabbit using a 30G needle on a 1 cc syringe, as we have described previously [9,21]. • The rabbit eye(s) were rinsed with sterile balanced salt solution.	WERI-Rb-1		Suggestion: (RRID:CVCL_1792)(link)
Software and Algorithms			
• Drug concentrations are averaged across rabbits at each time point, and the resulting mean time-concentration data from each matrix are analyzed via non-compartmental analysis (Phoenix® WinNonlin® v6.4, Pharsight/Certara USA Inc., Princeton, NJ) to determine pharmacokinetic (PK) parameters, including half-life.	Phoenix®		Suggestion: Phoenix (RRID:SCR_003163)(link)
	WinNonlin®		Suggestion: WinNonlin (RRID:SCR_024504)(link)
• Survival curves were graphed with GraphPad, and IC50 and IC90 were calculated.	GraphPad		Suggestion: GraphPad Prism, RRID:SCR_002798(link)
• After completing the regular fundus photography, a rapid bolus injection of fluorescein at a dose of 10–25% in a volume up to 2 mL was given, and serial images were immediately captured with the Pictor Plus fundus camera with the FA attachment.	Pictor Plus		
• Hyaluronidase is from Sigma (catalog# H3506), and collagenase is from Sigma (catalog# C0130).	Sigma		

Other Entities Detected

Your Sentences	Recognized Entity
Statistical Tests	
Next , emtrends function is used to estimate and test each treatment group 's trend with the Wald test .	Wald test
The Bonferroni correction was used with a multiple comparisons procedure to control the experiment-wise type I error rate at 5 % for each specific ERG test and each response value.	Bonferroni
The drug effect can be evaluated by the difference in cell number on the transformed scale between the correlated samples (left saline-treated eyes and right drug-treated eyes) using the paired t-test.	t-test

SciScore is an automated tool that is designed to assist expert reviewers by finding and presenting formulaic information scattered throughout a paper in a standard, easy to digest format. ***SciScore is not a substitute for expert review.*** SciScore also checks for the presence and correctness of several unique identifiers, including RRIDs (research resource identifiers) in the manuscript, detects sentences that appear to be missing RRIDs, and can even suggest RRIDs under certain circumstances. **All RRID suggestions should be verified;** only the author can know whether the suggestions are correct.
